Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

SUMMARIES

XX
XX The present invention describes an isolated anti-CD33 antibody or its
XX epitope-binding fragment comprising: (a) at least one complementarity-
XX determining region (CDR); or (b) at least heavy chain variable region
```

```
CC comprising 3 CDRs, and at least one light chain variable region, where
CC the CDR has the ability to bind CD33. Also described: (1) an
CC immunoglobulin comprising the antibody or its epitope-binding fragment
CC linked to a drug or prodrug; (2) a composition comprising the antibody or
CC epitope-binding fragment and a drug or prodrug; (3) a pharmaceutical
CC composition comprising the immunoglobulin, composition or the antibody
CC defined above, or its epitope-binding fragment, and a pharmaceutical
CC agent; (4) a diagnostic reagent comprising the antibody defined above,
CC where the antibody or antibody fragment is labelled; (5) inhibiting the
CC growth of a cell expressing CD33 by contacting the cell with the above
CC defined antibody or its epitope-binding fragment, immunoglobulin, or
CC (pharmaceutical) composition; (6) determining whether a biological sample
CC contains a myelogenous cancer cell; (7) an improved antibody or its
CC epitope-binding fragment that specifically binds to CD33; (8) an isolated
CC polynucleotide encoding the antibody or its epitope-binding fragment
CC defined above; (9) an isolated polynucleotide encoding a light or heavy
CC chain of the antibody defined above or its epitope-binding fragment; (10)
CC a recombinant vector comprising the polynucleotide; (11) a host cell
CC transformed with the recombinant vector; (12) producing an antibody or
CC its epitope-binding fragment having the ability to bind CD33; and (13)
CC obtaining CD33 from a biological material. The anti-CD33 antibody has
CC cytostatic activity. The antibody or its epitope-binding fragment,
CC immunoglobulin, composition can be used for treating a subject having a
CC disease where CD33 is expressed, such as myelodysplastic syndrome, acute
CC myeloid leukaemia, chronic myeloid leukaemia or pro-myelocytic leukaemia.
CC It can also be used for inhibiting the growth of cells expressing CD33,
CC and for in vivo imaging or as affinity purification agents. The present
CC sequence represents the mouse anti-CD33 antibody My9-6 light chain CDR1,
CC which is used in an example from the present invention.

PS Example 3; SEQ ID NO 48; 124dp; English.

XX The present invention describes an isolated anti-CD33 antibody or its
 CC epitope-binding fragment comprising: (a) at least one complementarity-
 CC determining region (CDR); or (b) at least heavy chain variable region
 CC comprising 3 CDRs, and at least one light chain variable region, where
 CC the CDR has the ability to bind CD33. Also described: (1) an
 CC immunocjugate comprising the antibody or its epitope-binding fragment
 CC linked to a drug or produg; (2) a composition comprising the antibody or
 CC epitope-binding fragment and a drug or produg; (3) a pharmaceutical
 CC composition comprising the immunocjugate, composition or the antibody
 CC defined above, or its epitope-binding fragment, and a pharmaceutical
 CC agent; (4) a diagnostic reagent comprising the antibody defined above,
 CC where the antibody or antibody fragment is labelled; (5) inhibiting the
 CC growth of a cell expressing CD33 by contacting the cell with the above
 CC defined antibody or its epitope-binding fragment, immunocjugate, or
 CC (pharmaceutical) composition; (6) determining whether a biological sample
 CC contains a myelogenous cancer cell; (7) an improved antibody or its
 CC epitope-binding fragment that specifically binds to CD33; (8) an isolated
 CC polynucleotide encoding the antibody or its epitope-binding fragment
 CC defined above; (9) an isolated polynucleotide encoding a light or heavy
 CC chain of the antibody defined above or its epitope-binding fragment; (10)
 CC a recombinant vector comprising the polynucleotide; (11) a host cell
 CC transformed with the recombinant vector; (12) producing an antibody or
 CC its epitope-binding fragment having the ability to bind CD33; and (13)
 CC obtaining CD33 from a biological material. The anti-CD33 antibody has
 CC cytostatic activity. The antibody or its epitope-binding fragment,
 CC immunocjugate, composition can be used for treating a subject having a
 CC disease where CD33 is expressed, such as myelodysplastic syndrome, acute
 CC myeloid leukaemia, chronic myeloid leukaemia or pro-myelocytic leukaemia.
 CC It can also be used for inhibiting the growth of cells expressing CD33,
 CC and for in vivo imaging or as affinity purification agents. The present
 CC sequence represents a mouse anti-CD33 antibody My9-6 light chain CDR
 CC peptide fragment, which is used in an example from the present invention.

 XX
 CC The present invention describes an isolated anti-CD33 antibody or its
 CC epitope-binding fragment comprising: (a) at least one complementarily-
 CC determining region (CDR); or (b) at least heavy chain variable region
 CC comprising 3 CDRs, and at least one light chain variable region, where
 CC the CDR has the ability to bind CD33. Also described: (1) an
 CC immunocjugate comprising the antibody or its epitope-binding fragment
 CC linked to a drug or prodrug; (2) a composition comprising the antibody or
 CC epitope-binding fragment and a drug or prodrug; (3) a pharmaceutical
 CC composition comprising the immunocjugate, composition or the antibody
 CC defined above, or its epitope-binding fragment, and a pharmaceutical
 CC agent; (4) a diagnostic reagent comprising the antibody defined above,
 CC where the antibody or antibody fragment is labeled; (5) inhibiting the
 CC growth of a cell expressing CD33 by contacting the cell with the above
 CC defined antibody or its epitope-binding fragment, immunocjugate, or
 CC (pharmaceutical) composition; (6) determining whether a biological sample
 CC contains a myelogenous cancer cell; (7) an improved antibody or its
 CC epitope-binding fragment that specifically binds to CD33; (8) an isolated
 CC polynucleotide encoding the antibody or its epitope-binding fragment
 CC defined above; (9) an isolated polynucleotide encoding a light or heavy
 CC chain of the antibody defined above or its epitope-binding fragment; (10)
 CC a recombinant vector comprising the polynucleotide; (11) a host cell
 CC transformed with the recombinant vector; (12) producing an antibody or
 CC its epitope-binding fragment having the ability to bind CD33; and (13)
 CC obtaining CD33 from a biological material. The anti-CD33 antibody has
 CC cytostatic activity. The antibody or its epitope-binding fragment,
 CC immunocjugate, composition can be used for treating a subject having a
 CC disease where CD33 is expressed, such as myelodysplastic syndrome, acute
 CC myeloid leukaemia, chronic myeloid leukaemia or pro-myelocytic leukaemia.
 CC It can also be used for inhibiting the growth of cells expressing CD33,
 CC and for in vivo imaging or as affinity purification agents. The present
 CC sequence represents the mouse anti-CD33 antibody My9-6 light chain
 CC variable region, which is used in an example from the present invention.

 XX
 PT New human binding domain-immunoglobulin fusion protein useful for
 PT treating a subject having or suspected of having a B-cell disorder or
 PT malignant condition e.g. rheumatoid arthritis.
 XX
 PS Disclosure; Page 119; 136pp; English.

The invention describes a binding domain-immunoglobulin fusion protein that is capable of at least one immunological activity, comprising a binding domain polypeptide fused to an immunoglobulin hinge region polypeptide capable of specifically binding to an antigen, or an immunoglobulin heavy chain CH2 or CH3 constant region polypeptide fused to the hinge region polypeptide or to the CH2 constant region polypeptide. The fusion protein is useful for treating a subject having or suspected of having a B-cell disorder or malignant condition e.g. rheumatoid arthritis, myasthenia gravis, Grave's disease, Hashimoto's thyroiditis, type I diabetes mellitus, multiple sclerosis, systemic lupus erythematosus, Sjogrens syndrome, immune thrombocytopenic purpura, psoriasis, scleroderma, cancer and inflammatory bowel disease such as Chron's disease and ulcerative colitis. The fusion protein retains the ability to participate in well known immunological effector activities including antibody dependent cell mediated cytotoxicity and/or complement fixation in complement dependent cytotoxicity, despite having structures that would not be expected to be capable of promoting the effector activities. It can be produced in substantial quantities that are typically greater than those routinely attained with single-chain antibody constructs. This is the amino acid sequence of a synthetic mouse immunoglobulin fusion protein

 PT New binding domain-immunoglobulin fusion protein, useful for treating a
 PT subject having or suspected of having a malignant condition or a B-cell
 PT disorder, e.g. melanoma, Grave's disease or autoimmune disease.
 XX
 PS Disclosure; SEQ ID NO 14; 157pp; English.

The invention relates to a binding domain-immunoglobulin fusion protein comprising a binding domain polypeptide that is fused to an immunoglobulin hinge region polypeptide, an immunoglobulin heavy chain CH2 constant region polypeptide that is fused to the hinge region polypeptide, and an immunoglobulin heavy chain CH3 constant region polypeptide that is fused to the CH2 constant region polypeptide. The hinge region polypeptide comprises a wild-type human IgG1 immunoglobulin hinge region polypeptide; a mutated human IgG1 immunoglobulin hinge region polypeptide; derived from (a) having 3 or more cysteine residues; where the mutated human IgG1 immunoglobulin hinge region polypeptide contains 2 cysteine residues, where the first cysteine is not mutated; a mutated human IgG1 immunoglobulin hinge region polypeptide, derived from (a) having 3 or more cysteine residues, where the mutated human IgG1 immunoglobulin hinge region polypeptide contains no more than one cysteine residue; and a mutated human IgG1 immunoglobulin hinge region polypeptide, derived from (a) having 3 or more cysteine residues; where the mutated human IgG1 immunoglobulin hinge region polypeptide contains no cysteine residues. The binding domain-immunoglobulin fusion protein is

CC capable of at least one immunological activity comprising antibody
CC binding domain polypeptide is capable of specifically binding to an
CC antigen. Also included are an isolated polynucleotide encoding the
CC binding domain-immunoglobulin fusion protein, a recombinant expression
CC construct comprising the polynucleotide (operably linked to a promoter),
CC a host cell transformed or transfected with a recombinant expression
CC construct, producing the binding domain-immunoglobulin fusion protein, a
CC pharmaceutical composition comprising the binding domain-immunoglobulin
CC fusion protein or polynucleotide and a carrier, and treating a subject
CC having or suspected of having a malignant condition or a B-cell disorder.
CC The binding domain-immunoglobulin fusion protein is useful for treating a
CC subject having or suspected of having a malignant condition or a B-cell
CC disorder, e.g. melanoma, carcinoma or sarcoma, rheumatoid arthritis,
CC myasthenia gravis, Grave's disease, type I diabetes mellitus, multiple
CC sclerosis or autoimmune disease. The present sequence is a binding domain
CC -immunoglobulin fusion protein-associated protein sequence. Note: The
CC sequence data for this patent formed part of the printed specification
CC and is also available in electronic format directly from USPTO at
CC seqdata.uspto.gov/sequence.html?DocID=20030118592. The authors have not
CC identified the sequences in the printed specification by their SEQ ID
CC number therefore none of the sequences can be explicitly identified.

XX New binding domain-immunoglobulin fusion protein for treating malignant

PT conditions (e.g. cancer) or B-cell disorders, comprises a binding domain
PT polypeptide and immunoglobulin heavy chain CH2 and CH3 constant region
PT polypeptides.

XX Disclosure; SEQ ID NO 14; 80pp; English.

XX The invention relates to a binding domain-immunoglobulin fusion protein
XX comprising a binding domain polypeptide that is fused to an
XX immunoglobulin hinge region polypeptide, an immunoglobulin heavy chain
XX CH2 constant region polypeptide that is fused to the hinge region
XX polypeptide, and an immunoglobulin heavy chain CH3 constant region
XX polypeptide that is fused to the CH2 constant region polypeptide. The
XX fusion protein is capable of at least one immunological activity such as
XX antibody dependent cell-mediated cytotoxicity and complement fixation,
XX and is capable of specifically binding to an antigen. The hinge region
XX polypeptide is selected from a mutated hinge region polypeptide that
XX contains no cysteine residues (and that is derived from a wild-type
XX immunoglobulin hinge region polypeptide, having one or more cysteine
XX residues), a mutated hinge region polypeptide that contains one cysteine
XX residue (and that is derived from a wild-type immunoglobulin hinge region
XX polypeptide having two or more cysteine residues), a wild-type human
XX immunoglobulin (Ig)A hinge region polypeptide, a mutated human IgA hinge
XX region polypeptide that contains no cysteine residues (and that is
XX derived from a wild-type human IgA region polypeptide) and a mutated
XX human IgA hinge region polypeptide that contains one cysteine residue
XX (and that is derived from a wild-type human IgA region polypeptide). Also
XX included are an isolated polynucleotide encoding the novel fusion
XX protein, a recombinant expression construct comprising the
XX polynucleotide, a host cell transformed or transfected with the
XX expression construct, producing the novel fusion protein (comprising
XX culturing the host cell under conditions that permit expression of the
XX novel fusion protein and isolating the binding domain-immunoglobulin
XX fusion protein from the host cell culture), a pharmaceutical composition
XX comprising the novel fusion protein in combination with a carrier and
XX treating a subject having or suspected of having a malignant condition or
XX a B-cell disorder (comprising administering to the patient an amount of
XX the novel fusion protein). The mutated hinge region polypeptide exhibits
XX a reduced ability to dimerize, relative to a wild-type human
XX immunoglobulin G hinge region polypeptide. The binding domain polypeptide
XX comprises at least one immunoglobulin variable region polypeptide
XX selected from an immunoglobulin light chain variable region polypeptide
XX and an immunoglobulin heavy chain variable region polypeptide, and
XX optionally at least one linker peptide that is fused to the
XX immunoglobulin variable region polypeptide. The immunoglobulin variable
XX and constant region polypeptides are derived from a human immunoglobulin.
XX The immunoglobulin heavy chain constant region CH2 and CH3 polypeptides
XX are of an isotype selected from human IgG and human IgA. The antigen is
XX selected from CD19, CD20, CD37, CD40 and L6. The binding domain
XX polypeptide comprises a CD154 extracellular domain, and optionally, at
XX least one immunoglobulin variable region polypeptide (e.g. mouse V1
XX Vh regions forming single chain antibodies which bind to one of the above
XX antigens). The composition and methods are useful in treating malignant
XX conditions (e.g. cancer) and B-cell disorders, including diseases
XX characterised by autoantibody production, such as rheumatoid arthritis,
XX myasthenia gravis, Grave's disease, type I diabetes mellitus, multiple
XX sclerosis or autoimmune diseases. The present sequence represents a mouse
XX single chain (scFv) antibody binding to one of the above antigens.

CC Humanized antibodies (hAbs) for IgG Fc receptors on human phagocytes
CC comprise the CDR of mouse monoclonal antibody 22 (from hybridoma 022WCL-
CC 1), VH chains from human IgG NEMW or KOL, and VK chains from Ig REI.
CC Sequences are provided for mouse 022 VH (AAR54931), humanized NEMW-based
CC VH (022 NMVH, AAR54929), humanized KOL-based VH (022 KLVH, AAR54930),
CC mouse 022 VK (AAR54933) and humanized REI-based VK (022 HuVK, AAR54932).
CC During hAb production, VH and VK cDNAs were PCR amplified using primers
CC given in AA065378-87. Mutagenesis of clone M13VHPCR2 KOL VH (L71R) was
CC performed using oligos AA065388-89. The hAbs can be used in
CC heteroantibody, bifunctional antibody and immunotoxin production.

 XX Hepatitis E virus monoclonal antibodies and their active fragments, for
 PT use in diagnosis and developing remedies e.g. vaccines for preventing or
 PT treating hepatitis E virus infection.
 PS
 XX Claim 2; Page 141, 165pp; Chinese.
 CC The invention relates to a monoclonal antibody that binds specifically to
 CC hepatitis E virus open-reading frame (ORF) 2. Also disclosed are
 CC nucleotide sequences encoding the heavy-chain and/or light-chain variable
 CC region of their degeneration sequences. The monoclonal antibody is
 CC selected from anti-HEV monoclonal antibody 8C11 secreted by hybridoma
 CC CCTCC-C200116, anti-HEV monoclonal antibody 13D8 secreted by hybridoma
 CC CCTCC-C200114, anti-HEV monoclonal antibody 8H3 secreted by hybridoma
 CC CCTCC-C200117, and anti-HEV monoclonal antibody 16D7 secreted by
 CC hybridoma CCTCC-C200114. The monoclonal antibodies and their active
 CC fragments are useful in diagnosis and developing remedies e.g. vaccines
 CC for preventing or treating hepatitis E virus infection. From the whole
 CC HEV gene obtained in patients, the HEV ORF fragment was prepared by using
 CC the method of Aye et al. The polypeptide NE2 was then expressed and
 CC isolated after biotechnological manipulations, which was characterised.
 CC Its analogs were also produced for immunising mice and construction of
 CC hybridomas. Tests were carried out to confirm usefulness of such
 CC polypeptides and monoclonal antibodies. The current sequence represents a
 CC HEV related protein.

PT New polypeptide comprising a complementarity determining region (CDR)
PT consisting of CDR1a, CDR2a, CDR3a, CDR1b, CDR2b or CDR3b and capable of
PT binding hepatocyte growth factor, useful in preparing a composition for
PT treating cancer.

XX Example 3; SEQ ID NO 174; 301pp; English.

XX The invention relates to a novel isolated polypeptide comprising at least
CC one complementarity-determining region (CDR) consisting of CDR1a, CDR2a
CC or CDR3a, or CDR1b, CDR2b or CDR3b. The polypeptide, in association with
CC an antibody heavy or light chain, is capable of binding hepatocyte growth
CC factor (HGF); HGF, also known as scatter factor (SF), has been identified
CC as a potent mitogen for hepatocytes and also as a secretory protein of
CC fibroblasts and smooth muscles that acts to induce motility of epithelial
CC cells. The polypeptide demonstrates cytostatic activity and may be useful
CC in preparing a composition for treating cancer or a solid tumor. The
CC current sequence is that of the human anti-HGF antibody kappa light chain
CC variable region protein SEQ174 of the invention.

PT New antibody competitively inhibiting immunospecific binding of a human
PT SMS-1 specific monoclonal antibody to a SMS-1 target antigen, useful in
PT treating malignancies such as melanoma, breast cancer or hepatocellular
PT carcinoma.

XX Claim 7; SEQ ID NO 2; 85pp; English.

XX The present invention relates to an antibody that competitively inhibits
CC the immunospecific binding of a human SMS-1 specific monoclonal antibody
CC (hSMS-1) to a SMS-1 target antigen. The invention is useful in the
CC fields of cancer biology and immunotherapy, in particular for diagnosing
CC and treating malignancies such as melanoma, breast cancer or
CC hepatocellular carcinoma. The present sequence is the humanized anti-SMS-
CC 1 antibody, ResMS-1 light chain variable (VL) region. This sequence is
CC generated by grafting a CDR (complementarity determining region) from

CC mouse SM5-1 light chain into a human Bence-Jones protein I antibody light
 CC chain framework region.

PT Screening compounds useful for treating tumor metastasis involves
 PT administering a test compound to non-human animal model bearing soft
 PT tissue/bone metastasis and identifying compound that inhibits soft tissue
 PT growth/bone metastasis.

PS Example 2; SEQ ID NO 1; 109pp; English.

CC The present invention relates to the screening of candidate molecules
 CC [anti-transforming growth factor (TGF)-beta antibodies] for the treatment
 CC of tumor metastasis and treatment methods using such molecules. The
 CC screening method of the invention involves administering several test
 CC substances to a non-human syngeneic immunocompetent animal model bearing
 CC at least one soft tissue or bone metastasis optionally in presence of a
 CC primary tumor, determining the effects of these test substances on the
 CC soft tissue or bone metastasis and growth of the primary tumor and
 CC identifying a test substance inhibiting soft tissue growth or bone
 CC metastasis without adverse effect on the status of the primary tumor. The
 CC invention is useful in the diagnosis and treatment of breast cancer,
 CC colorectal cancer, liver and lung metastases, bone destruction and bone
 CC loss. The animal models of the present invention is useful to screen
 CC substances useful for the prophylaxis or treatment of soft tissue and/or
 CC bone metastases which may additionally be effective in treating the
 CC primary tumor. The present sequence is murine anti-TGF-beta antibody

CC (267) variable light chain (VL) monoclonal antibody protein.

PT New chimeric protein comprises an Flt3 ligand and a proteinous or
PT peptidyl tumoricidal agent, useful for treating malignancy or neoplasm,
PT e.g. melanoma, breast cancer, or hepatocellular carcinoma.
XX
PS Example 3; SEQ ID NO 22; 158bp; English.
XX
CC The present invention relates to a chimeric protein having a Flt3 ligand
CC (FL) or its biologically active fragment and a proteinous or peptidyl
CC tumoricidal agent. The invention is useful for treating malignancy,
CC neoplasm e.g. melanoma, breast cancer, hepatocellular carcinoma and as a
CC vaccine for eliciting an immune response. The invention is also useful in
CC gene therapy. The present sequence is the SMS-1 humanized antibody (husm)
CC light chain DNA.

XX New molecules which bind B7.1 and B7.2 - useful to prevent and treat

XX immune diseases including allograft rejection.

XX Example 7.3; Fig 34; 182pp; English.

CC This polypeptide comprises a 1G10 monospecific triabody composed of the
 CC VH region of anti-B7.2 monoclonal antibody (Mab) 1G10 joined to the VL
 CC region of 1G10. A triabody is a mono- a bi- or a trispecific molecule
 CC recognising simultaneously e.g. two B7.2 and one B7.1 molecules. It has
 CC a rigid structure that prevents simultaneous binding to the 3 targets.
 CC Each antigen-binding site is formed by pairing of one VH and one VL

CC domain from the same or from two different polypeptides. The invention
 CC relates to novel molecules, including triabodies, which can cross-link
 CC and/or cross-react with the costimulatory molecules B7.1 and B7.2
 CC expressed on professional antigen-presenting cells, leading to the
 CC inhibition of antigen-specific T cell activation. Methods are provided
 CC for the production of such B7-binding molecules, and for their use in the
 CC treatment or prevention of diseases of the immune system, in particular
 CC graft rejection, graft versus host disease, allergy and autoimmune
 CC diseases (claimed)

XX This sequence is the multispecific single chain antibody designated H22.
 CC The antibody can be used in the method of the invention for inducing
 CC antibody-dependent cellular cytotoxicity (ADCC) against a tumour cell
 CC which is characterised by overexpression of HER 2/neu or epidermal growth
 CC factor receptor (EGFR), comprises contacting the tumour cell with a
 CC multispecific protein molecule (preferably a single chain antibody)
 CC comprising: (a) an anti-Fc receptor antibody or an antigen binding
 CC fragment; (b) a portion which binds to HER 2/neu; and (c) a portion which
 CC binds to EGFR. The method can be used for treating cancers especially
 CC breast cancer or ovarian cancer. The multispecific antibody can also be
 CC administered prophylactically to vaccinate a subject against infection by
 CC a target cell

XX
CC The invention relates to a new method for inducing killing of a tumor
CC cell which expresses HER 2/neu or epidermal growth factor receptor
CC (EGFR). The method comprises contacting the tumor cell with a
CC multispecific protein comprising a component, preferably an antibody,
CC which binds to an Fc receptor (FcR), Her 2/neu or EGFR. The method is
CC useful for inducing killing of a tumor cell from breast cancer, sarcoma,
CC carcinoma, or ovarian cancer. Specific multispecific proteins can also be
CC administered to a subject to treat or prevent other diseases or
CC conditions, including pathogenic infections (e.g., viral (such as HIV)),
CC protozoan infections (such as Toxoplasma gondii), fungal infections (such
CC as candidiasis), and an autoimmunity (e.g. immune thrombocytopenia
CC purpura and systemic lupus). The present sequence represents the amino
CC acid sequence of a single chain humanised anti-FcgammaRI antibody H22
CC encoded by construct 225

XX
CC This sequence represents a fusion protein comprising anti-Fc gamma
CC receptor antibody H22 sfv and the transmembrane domain of platelet
CC derived growth factor receptor (PDGFR-TM). H22 is a humanised monoclonal
CC antibody produced by cell line HA022CL1 (ATCC CRL 11177). The fusion
CC protein is encoded by expression vector pJG717 (see AAX58935). The H22
CC sfv was expressed on the surface of murine tumour cells transformed with
CC this vector. These transformed tumour cells, when in the presence of
CC macrophages, engaged and activated Fc gamma RI, resulting in specific
CC lysis of the tumour cells. Induction of cytokines by H22-TM transformed
CC tumour cells was also demonstrated. This is an example of cells of the
CC invention that have been transformed to express on their surface a
CC component which binds to an Fc receptor of an effector cell. The
CC transformed cell is targeted to an effector cell via the Fc binding
CC component, and can be used as a vehicle to increase an effector cell-
CC mediated immune response, such as cell lysis and phagocytosis, against an
CC antigen associated with the cell. The transformed cells are used to treat
CC cancer and infectious diseases or used as vaccines. The method allows for
CC killing of target cells without targeting any particular antigen on the
CC cell. This is advantageous since many tumour cells and other target cells
CC do not have defined antigens for targeting

XX  comprising an anti-Fc receptor antibody and a portion which binds to a
XX  target cell.
XX
XX
XX  Example 8; Fig 40; 57pp; English.
XX
XX
XX  This sequence represents the construct 321, which is a fusion between an
XX  anti-CEA antibody and a multispecific single chain antibody designated
XX  H22. The antibody can be used in the method of the invention for inducing
XX  antibody-dependent cellular cytotoxicity (ADCC) against a tumour cell
XX  which is characterised by overexpression of HER 2/neu or epidermal growth
XX  factor receptor (EGFR), comprises contacting the tumour cell with a
XX  multispecific protein molecule (preferably a single chain antibody)
XX  comprising: (a) an anti-Fc receptor antibody or an antigen binding
XX  fragment; (b) a portion which binds to HER 2/neu; and (c) a portion which
XX  binds to EGFR. The method can be used for treating cancers especially
XX  breast cancer or ovarian cancer. The multispecific antibody can also be
XX  administered prophylactically to vaccinate a subject against infection by
XX  a target cell

XX Bispecific molecule comprising specific binding sites for an Fc-alpha
PT receptor and an epidermal growth factor, used to induce effector cell
PT killing of tumor cells.
XX
PS Example 8; Fig 40 A-D; 1833p; English.
XX
CC The invention relates to a bispecific molecule (I) comprising specific
CC binding sites for an Fc-alpha receptor and an epidermal growth factor
CC (EGF) receptor. It also provides bispecific molecule (II) comprising a
CC human antibody, preferably a single chain antibody, specific for an
CC Fc-alpha receptor, linked to EGF; a bispecific molecule (III) comprising
CC multiple binding sites for an Fc-alpha receptor and a HER2 receptor; (3) a
CC multispecific molecule (IV) comprising specific binding sites for Fc-alpha
CC receptor, HER2 receptor and EGF receptor; (4) a multispecific molecule
CC (V) comprising a human antibody specific for an Fc-alpha receptor, a human
CC antibody specific for a HER2 receptor, and EGF. (1)-(V) can be used for
CC inducing effector cell killing of tumour cells. The molecules can be used
CC to treat or prevent viral, protozoal, or fungal infections, or autoimmune
CC diseases such as immune thrombocytopenia purpura and systemic lupus
CC erythematosus. The present sequence represents the amino acid sequence of
CC a bispecific single chain molecule H22-anti-CEA, having one binding
CC specificity for the Fc-gamma RI and one binding specificity for CEA

New molecules which bind B7.1 and B7.2 - useful to prevent and treat

immune diseases including allograft rejection.

Example 7.1; Fig 18; 182pp; English.

This polypeptide comprises the bispecific tetravalent antibody BitB1G10-

B7-24H6. The molecule consists of 4 scFvs, i.e. 2 anti B7.1 scFvs and 2

anti B7.2 scFvs (tetravalency). One single BitB1 is a homodimer of 2

identical molecules, each containing both an anti B7.1 and anti B7.2 scFv

(bispecificity). An anti-B7.1 and anti-B7.2 scFv are linked using a

dimerisation domain (see AAW90219), which drives the homodimerisation of

the molecule. DNA (see AAX01652) encoding the BitB1 has been constructed

to allow expression of the BitB1 in transformed E. coli cells. The BitB1

cross-links, and/or cross-reacts, with the costimulatory molecules B7.1

and B7.2 that are expressed on the membrane of professional antigen-

presenting cells, leading to the inhibition of antigen-specific T cell

activation. The invention relates to such B7-binding molecules, methods

for their production, and their use for treating or preventing diseases

of the immune system, in particular graft rejection, graft versus host

disease, allergy and autoimmune diseases (claimed)

Database : UniProt_05.80:*\n1: uniprot_sprot:*\n2: uniprot_trembl:*

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

 PT
 XX Claim 9; Page 76; 123pp; English.
 PS
 XX This invention describes a novel modified immunoglobulin (mIg), or its
 CC fragment, that binds immunospecifically to one member (M1) of a binding
 CC pair comprising a variable domain (V) having at least one CDR
 CC (complementarily determining region) that contains a portion of the
 CC second member (M2) of the pair. This portion is not present in the
 CC natural CDR and M1 is a cancer antigen, infectious disease agent antigen,
 CC a cellular receptor for an infectious agent (provided the binding site is
 CC not NAMP or NNDP) or a member of a receptor-ligand pair. mIg (also
 CC related molecules containing the same V region), optionally coupled to a
 CC chemotherapeutic agent, are used in the same V region, optionally coupled to a
 CC compositions, or vaccines, against cancers, infectious or autoimmune
 CC diseases (rheumatoid arthritis, ulcerative colitis or psoriasis) or
 CC allergies. They can also be used as immunoassay reagents for diagnosing
 CC these conditions. mIg can be used in human or veterinary medicine. mIg
 CC have higher affinity or specificity than native antibodies. Manipulation
 CC of CDR ensures binding specificity and avoids the unpredictable
 CC immunization and screening procedures currently used. It is now possible
 CC to generate antibodies against antigens that are inaccessible, by virtue
 CC of immune tolerance or cryptic expression. mIg neutralize antigens
 CC directly or they induce an anti-idiotypic immune response. This sequence
 CC represents a fragment of modified immunoglobulin that immunospecifically
 CC binds to a binding pair in which the first member is the human milk fat
 CC globule antigen

 DR
 XX Chimeric variants of CC49 monoclonal antibodies useful for detecting and
 PT treating cancers associated with the expression of the pancreaticoma tumor
 PT -associated antigen TAG-72.
 PS
 XX Disclosure; Fig 2; 76pp; English.
 CC
 XX The present sequence is that of complementarity determining region 2 (L-
 CC CDR2) of the light chain variable region (VL) of human monoclonal
 CC antibody LEN. The invention is directed toward mouse-human chimeric
 CC variants of CC49 Mabs with minimal murine content, to methods of making
 CC such variants, and to their therapeutic application. Variants are
 CC provided of huCC49, a humanised Mab formed by grafting hypervariable
 CC regions from murine CC49 into VL and VH frameworks of human Mabs LEN and
 CC 21/28' CL, respectively, while retaining murine framework residues
 CC required for integrity of the antigen combining site structure. HuCC49
 CC binds to the human pancreaticoma tumor associated glycoprotein-72 (TAG-
 CC 72), which is found on the surface of certain human tumours. Novel
 CC variants of huCC49 of the invention have fewer than all 6 CDRs of CC49
 CC present. Also provided are specificity determining region (SDR) variants
 CC of huCC49 in which only SDRs of at least 1 CDR from CC49 are present.
 CC Particular variants of huCC49 have either L-CDR1 and/or L-CDR2 from human
 CC Mab LEN. These variants have the same or 2-fold lower affinity constant
 CC than huCC49. They are used in claimed methods of treating cancer and for
 CC detecting cancer cells that express TAG-72

XX
XX Treatment of neutropenia by stimulating proliferation of neutrophilic
XX cell lineage progenitors.
XX
XX Claim 13; Page 30; 64pp; English.
XX
XX The present sequence represents complementarity determining region 2
XX (CDR2) of the light chain variable region of murine monoclonal antibody
XX mAb163-93. This antibody is an example of an agonist molecule that
XX specifically binds to or interacts with human granulocyte colony
XX stimulating factor (G-CSF) receptor to stimulate cell proliferation and
XX differentiation, especially by dimerizing the receptor or activating
XX phosphorylation of kinases associated with the receptor. Agonist
XX antibodies can be used to stimulate proliferation of G-CSF-dependent
XX cells, e.g. to differentiate leading to a repopulation of neutrophilic
XX granulocyte lineage cells, especially to treat neutropenia (claimed).
XX They can also be used to detect human G-CSF receptor immunologically.

PT Humanized immunoglobulin having a binding specificity to B7-1 (derived
PT from ARCC PTA-263), or B7-2 (derived from ARCC CRU-12524) molecules,
PT modulates immune responses and can therefore treat e.g. autoimmune
PT diseases, infectious diseases.
XX
XX Disclosure; Page 28; 162pp; English.
XX
XX
XX The present sequence represents a complementarity determining region
XX (CDR) 2 from the light chains of a murine antibody with having a binding
XX specificity to B7-2 molecules. The sequence is used to construct
XX humanized immunoglobulins, which comprise an antigen binding region of
XX non-human origin and a portion of a human immunoglobulin. The humanized
XX immunoglobulins are useful for treating autoimmune diseases, infectious
XX diseases, inflammatory disorders, systemic lupus erythematosus, diabetes
XX mellitus, insulinitis, asthma, arthritis, inflammatory bowel disease,
XX inflammatory dermatitis, and multiple sclerosis. The immunoglobulins are
XX also useful for treating a transplant recipient or preventing transplant
XX rejection in a transplant recipient, and treating proliferative disease
XX (leukemia, lymphoma and cancer), anaemia (sickle-cell anaemia,
XX thalassemia and aplastic anaemia), inborn errors of metabolism,
XX congenital immunodeficiency diseases, and myeloid dysplasia syndrome

XX trkA/trkB, and recognizes epitope in domain 5 of trkC.
XX

XX Claim 13; Fig 11, 121pp; English.
PS
XX
CC The invention relates to an anti-tyrk agonist monoclonal antibody which
CC shows no significant cross-reactivity with tyrk or tyrkB, and recognizes
CC an epitope in domain 5 of tyrk. The antibodies of the invention are
CC effective in the treatment of cleft-lip- or pyridoxine-induced
CC neuropathy, peripheral neuropathy, diabetic neuropathy and large-fibre
CC sensory neuropathy, neurodegenerative disease including amyotrophic
CC lateral sclerosis, nerve cell injuries, disorders of insufficient blood
CC cells such as leukopenia, including eosinopenia, basopenia,
CC lymphopenia, monocytopenia, neutropenia, Alzheimer's disease,
CC Parkinson's disease, Huntington's disease and tumours. The sequences are
CC also useful for inducing angiogenesis for treating wounds, ulcers and
CC diabetic complications of sickle cell disease, for treating cardiac
CC ischaemia and cerebrovascular disorders and in the diagnosis of diseases
CC involving cellular degeneration. Sequences AA61229-AA61284 represent
CC human and mouse anti-tyrk agonist monoclonal antibodies and antibody
CC fragments of the invention

PT New human immunopolypeptide with binding specificity for certain envelope
XX glycoproteins and nonstructural proteins of hepatitis C virus (HCV), for
XX diagnosing or treating patients having or suspected of having HCV
XX infection.
XX
PS Claim 1; Fig 17; 308pp; English.
XX
CC The present invention relates to human immunopolypeptides, produced by a
CC phage transfect cell library. The present sequence is one such
CC immunopolypeptide. The immunopolypeptides have binding specificity for
CC envelope glycoprotein E2 and nonstructural protein NS3 of hepatitis C
CC virus (HCV). E2 glycoprotein is believed to be responsible for target

CC cell binding and contains neutralising epitopes, while NS3 is thought to
CC be involved in the replication of HCV. The immunopolypeptides are useful
CC for diagnosing and treating a patient having or suspected to be having
CC HCV infection

PT New anti-clumping factor A (C1fa) monoclonal antibody, useful for
XX treating or preventing Staphylococcus aureus infection e.g. wound
XX infections, impetigo, furuncles, pneumonia, septic arthritis or sepsis in
XX a human or animal.
XX
PS Claim 30; Page 55; 80pp; English.
XX
XX The invention relates to monoclonal antibody which binds the clumping
XX factor A (C1fa) protein from Staphylococcus aureus. The anti-C1fa
XX monoclonal antibody is useful for treating or preventing S. aureus
XX infection in a human or animal, and for inhibiting the binding of
XX staphylococcal bacteria to fibrinogen or fibrin. The immunogenic fragment
XX S. aureus C1f40 protein, S. aureus C1f33 protein, or the S. aureus N3
XX protein is useful for inducing an immunological response in a human or
XX animal. These staphylococcal infections include wound infections, sepsis,
XX impetigo, furuncles, pneumonia, septic arthritis or endocarditis. The
XX present sequence is an anti-C1fa monoclonal antibody variable light chain
XX complementarity determining region (CDR)

PT Cytokine receptor binding peptide construct, in particular interferon
PT receptor binding peptide construct for use as an interferon mimetic,
PT comprises a cytokine receptor binding domain incorporated in a molecular
PT scaffold.

PS Example 8; Page 50; 105pp; English.

XX This invention relates to a novel cytokine receptor binding peptide
CC construct comprising a cytokine receptor binding domain incorporated in a
CC suitable molecular scaffold so that the scaffold maintains the binding
CC domain in a configuration suitable for binding to the cytokine receptor.
CC The peptides of the invention may have cytosstatic, virucide,
CC hepatotropic, antiinflammatory, neuroprotective, immunosuppressive and
CC antithyroidic activities. A new interferon receptor binding peptide
CC construct is useful in the manufacture of a medicament as an interferon
CC (IFN) mimetic. A peptide that mimics the effect of IFN is useful in
CC medical therapies for cancer, haematological malignancies, viral
CC infections (hepatitis B or C), multiple sclerosis and autoimmune diseases
CC such as arthritis, to detect modulators of IFN action, in screening
CC assays to compare the activity and/or interaction with another molecule
CC or potential IFN modulator and also in the diagnosis of IFN activity
CC related disorders. A nucleic acid encoding the peptide of the invention
CC or is useful for the treatment and therapy of the mentioned medical
CC conditions. The peptide of the invention has less side effect than those
CC of native cytokines. The present sequence represents an interferon
CC receptor binding peptide of the invention

PT Preparing immunoglobulin binding protein array in plant cells by
PT transforming the cells with different polynucleotides encoding binding
PT protein polypeptides specific to ligand, selecting plant cells for
PT preparing array.

PS Disclosure; Page 14; 129pp; English.

XX The invention relates to transforming a population of cells (e.g. plant
CC cells), comprising using a library of two different polynucleotides
CC encoding different immunoglobulin binding protein (IGBP) polypeptides
CC that specifically bind to a ligand or form one or more disulphide bonds
CC with polypeptides in transfected cells, to generate an IGBP that binds to
CC a ligand, and transformed plant cells are selected, and preparing an IGBP
CC array in plant cells. At least one peptide sequence has at least 75%
CC sequence identity to a framework region (FR) of a native IGM, IGG, IGA,
CC IGD, IGB, IGY, kappa or lambda immunoglobulin molecule. The method is
CC useful for preparing an immunoglobulin binding protein array, preferably
CC heavy chain binding protein (CHBP) array in eukaryotic cells especially
CC plant cells (e.g. Agrobacterium tumefaciens or maize) or other eukaryotic
CC cells (e.g. insect cells or mammalian cells). The CHBP is useful for
CC discovery of e.g. screening assays of IGBPs having desired
CC characteristics. The present sequence is a mammalian immunoglobulin
CC derived peptide that may be incorporated into an IGBP of the invention

PS
XX
XX The present invention relates to a variant of an immunoglobulin variable
CC domain comprising at least one complementarity determining region (CDR)
CC and framework regions flanking the CDR, where the variant also comprises
CC a CDR region to which at least one binding sequence is added or
CC substituted, and flanking framework regions, where the binding sequence
CC is heterologous to the CDR and is an antigenic sequence from a mucin-1
CC (MUC-1) binding sequence. The variant immunoglobulin variable domain is
CC preferably a variant of the variable region of an anti-mucin monoclonal
CC antibody such as the anti-MUC-1 monoclonal antibody HMFg-1 (human milk
CC fat globule-1). Compositions comprising the variant immunoglobulin and
CC the methods of the present invention are useful for treating cancer by
CC eliciting an anti-idiotypic response targeted to tumour cells that bear
CC mucin-like glycoproteins on neoplasms of epithelial origin, including
CC carcinomas of the breast, ovary and gastrointestinal tract. A vaccine
CC based on the sequence of the HMFg-1 monoclonal antibody may be used in
CC the treatment and prevention of breast cancer and other epithelial-
CC derived tumours. The present sequence represents a CDR contained in the
CC light chain variable region of HMFg-1

PT Novel LL2 monoclonal antibody useful for diagnosing and treating B-cell
 PT lymphoma or leukemia.
 XX

PS Claim 7; Page 11; 30pp; English.
 XX

CC The invention relates to an isolated polynucleotide comprising a DNA
 CC sequence encoding the amino acid sequence of light chain (kappa) variable
 CC (VK) region or heavy chain variable (VH) region of LL2 monoclonal
 CC antibody (mab), and hLL2 VK domain or hLL2 VH domain. Also included are a
 CC protein encoded by the DNAs listed above, an isolated complementarity

CC determining region-1 (CDRL1, CDR2 or CDR3) polypeptide of the VK or VH
 CC region of the LL2 mab, a cll2 mab (comprising the light chain and heavy
 CC chains of the LL2 mab linked to the human kappa and human IgG 1 constant
 CC regions, respectively), an hLL2 mab (comprising a light chain and a heavy
 CC chain CDR of a mLL2 mab joined to a framework sequence of a human VK and
 CC human VH region, respectively, linked to human kappa and IgG 1 constant
 CC region domains, respectively, such that the hLL2 mab retains
 CC substantially the B-lymphoma cell and leukemia cell targeting cell
 CC internalisation characteristics of the parent mLL2 antibody) and a
 CC conjugate comprising a cll2 or hll2 antibody or its fragment covalently
 CC bound to a diagnostic or therapeutic reagent. The conjugate is useful for
 CC treating and diagnosing a B-cell lymphoma or leukemia in a subject. The
 CC present sequence represents mouse LL2 VKappa CDR2.

PT New antibodies that bind to CD33, useful for treating a disease
PT associated with CD33 expression, such as myelodysplastic syndrome, acute
PT or chronic myeloid leukemia.
PS
PS Claim 1; SEQ ID NO 5; 124pp; English.
XX
XX The present invention describes an isolated anti-CD33 antibody or its
CC epitope-binding fragment comprising: (a) at least one complementarity-
CC determining region (CDR); or (b) at least heavy chain variable region
CC comprising 3 CDRs, and at least one light chain variable region, where
CC the CDR has the ability to bind CD33. Also described: (1) an
CC immunconjugate comprising the antibody or its epitope-binding fragment
CC linked to a drug or prodrug; (2) a composition comprising the antibody or
CC epitope-binding fragment and a drug or prodrug; (3) a pharmaceutical
CC composition comprising the immunconjugate, composition or the antibody
CC defined above, or its epitope-binding fragment, and a pharmaceutical
CC agent; (4) a diagnostic reagent comprising the antibody defined above,
CC where the antibody or antibody fragment is labelled; (5) inhibiting the
CC growth of a cell expressing CD33 by contacting the cell with the above
CC defined antibody or its epitope-binding fragment, immunconjugate, or
CC (pharmaceutical) composition; (6) determining whether a biological sample
CC contains a myelogenous cancer cell; (7) an improved antibody or its
CC epitope-binding fragment that specifically binds to CD33; (8) an isolated
CC polynucleotide encoding the antibody or its epitope-binding fragment
CC defined above; (9) an isolated polynucleotide encoding a light or heavy
CC chain of the antibody defined above or its epitope-binding fragment; (10)
CC a recombinant vector comprising the polynucleotide; (11) a host cell
CC transformed with the recombinant vector; (12) producing an antibody or
CC its epitope-binding fragment having the ability to bind CD33; and (13)
CC obtaining CD33 from a biological material. The anti-CD33 antibody has
CC cytostatic activity. The antibody or its epitope-binding fragment,
CC immunconjugate, composition can be used for treating a subject having a
CC disease where CD33 is expressed, such as myelodysplastic syndrome, acute
CC myeloid leukaemia, chronic myeloid leukaemia or pro-myelocytic leukaemia.
CC It can also be used for inhibiting the growth of cells expressing CD33,
CC and for in vivo imaging or as affinity purification agents. The present
CC sequence represents the mouse anti-CD33 antibody My9-6 light chain CDR2,
CC which is used in an example from the present invention.

PT Identifying a B cell carrying a surface immunoglobulin molecule having a
PT binding site for an antigen of interest, useful for constructing
PT therapeutic antibodies, comprises contacting a sample with the antigen
PT and a receptor.
XX
XX
PS Example 6; SEQ ID NO 66; 156pp; English.
XX
XX
CC The invention relates to a novel method for identifying a B cell carrying
CC a surface immunoglobulin (Ig) molecule having a binding site for an
CC antigen of interest. The method comprises contacting a sample putatively
CC containing the B cell with the antigen of interest and with a receptor
CC specifically binding to the Ig molecule, and assessing the presence of
CC the detectable signal. The invention further comprises: an antibody
CC generated by the method above which is specific for human CD28 or
CC comprising an amino acid(s) sequence(s) given in the specification,
CC and/or are encoded by a nucleic acid sequence(s) also given in the
CC specification; and a device for assessing the presence of a detectable
CC signal defined above, where the device comprises a closed system for the
CC detection laser-beam and a catcher tube, and where the B cell of interest
CC can be collected as a single cell by means of an electrochemical device,
CC which is triggered by an electric signal generated by the fluorescence
CC activated cell sorter (FACS) device, where the electrochemical device
CC moves the nozzle of the steady catcher tube liquid stream for a
CC programmed time over a collecting tube, microtiter plate or other
CC container after a B cell is sorted. The method is useful for identifying
CC a B cell carrying a surface Ig molecule having a binding site for an
CC antigen of interest. The method is also useful for cloning of antibody
CC variable regions from the identified B cells, which may subsequently be
CC employed in the construction of proteins such as antibodies or its
CC fragments or derivatives useful in therapeutic approaches. The method is
CC useful as an alternative to phage display for the gain of antibodies or
CC its fragments. This sequence represents an S2 cell derived human
CC polypeptide of the invention.

PT      Promoting oligodendrocyte survival in humans with neurological diseases,
PR      such as Alzheimer's disease, multiple sclerosis and/or stroke, using an
PS      anti-myelin-associated glycoprotein (MAG) antibody.
XX
XX      Claim 6; SEQ ID NO 2; 45pp; English.
CC      The specification describes a method for promoting oligodendrocyte
CC      survival in a human suffering or at risk of developing stroke or another
CC      neurological diseases. The method comprises administering to the human an
CC      anti-myelin-associated glycoprotein (MAG) antibody or its functional
CC      fragment. The anti-MAG antibody or its functional fragment is useful in
CC      the manufacture of a medicament for the promotion of oligodendrocyte
CC      survival in a human suffering from or at risk of developing stroke or
CC      another neurological disease. They can also be used in treating
CC      neurological diseases, such as Alzheimer's disease, multiple sclerosis
CC      and/or stroke, by promoting oligodendrocyte survival. AD588786-AD588788
CC      represent the light chain complementarity determining regions (CDRs) of
CC      an anti-MAG antibody which can be used in the method of the invention.

DR	New non-muscular type myosin heavy chain type A antigen expressed on cell
PT	surface of tumor mass, useful as target in treatment of cancer such as
PT	stomach cancer.
PS	Claim 18; SEQ ID NO 5; 60pp; Japanese.
XX	This invention relates to a novel antigen expressed on the surface of a
CC	cell during formation of a tumour mass. Specifically, it refers to a
CC	labelled ligand that is capable of recognising this antigen and a
CC	pharmaceutical composition derived thereof useful for treating a cancer
CC	patient. The present invention describes the antigen as a cytoskeletal
CC	protein such as myosin or its variant and preferably it is a non-muscular
CC	type myosin heavy-chain type A protein. Accordingly, the pharmaceutical
CC	compositions developed thereof exhibit cytostatic activity and are useful
CC	as anticancer agents in patients expressing this antigen and where the
CC	cancer is chosen from stomach, breast, colon or oesophageal cancer.
CC	Furthermore, the ligand is a monoclonal antibody, preferably a humanised
CC	monoclonal antibody that has cancer reactive properties and as such can
CC	specifically target the cancerous tissue or cell. This peptide sequence
CC	is from the human monoclonal antibody (GAH) light chain, hypervariable
CC	region, given in an exemplification of the invention.

 XX
 PT Preparing human binding molecule specifically binding to human CD3
 PT complex, comprises selecting molecules specifically binding to
 PT extracellular domain of recombinant epsilon-chain and preparing
 PT identified selected binding molecule.
 XX
 PS Claim 27; SEQ ID NO 126; 350pp; English.
 XX
 CC The invention relates to a method of preparing a human binding molecule,
 CC fragment or its derivative which specifically binds to the human CD3
 CC complex. The method comprises selecting molecules specifically binding to
 CC or interacting with the extracellular domain of recombinant epsilon-chain
 CC expressed independent of the human CD3 complex in the absence of other
 CC members of the CD3 complex, from a population of candidate polypeptides
 CC encoded by a library, selecting molecules from a population identified in
 CC the above step for binding to the human CD3 complex, and preparing the
 CC selected binding molecule. The binding molecule is an antibody molecule,
 CC antibody fragment or its derivative or an antibody construct. Also
 CC disclosed is a nucleic acid sequence encoding a human binding molecule, a
 CC vector comprising such a nucleic acid, a host transformed or transfected
 CC with such a vector, a composition comprising a human binding molecule,
 CC and optionally a proteinaceous compound capable of providing an
 CC activation signal for immune effector cells, and a kit comprising a human
 CC binding molecule. The method further involves recombinant expression of
 CC the binding molecule, fragment or its derivative encoded by a nucleic
 CC acid sequence chosen from the identified nucleic acid sequence, a nucleic
 CC acid sequence hybridizing with the complementary strand of the identified
 CC nucleic acid sequence under stringent hybridization conditions, and a
 CC nucleic acid sequence which is degenerate as a result of the genetic code
 CC to the above mentioned nucleotide sequences. The antibody molecule,
 CC antibody fragment or its derivative or construct comprises a further
 CC antigen-interaction-site and/or a further effector domain, and is
 CC humanized and/or deluminized in an additional step. The further antigen-
 CC interaction-site is specific for one or more cell surface molecule such
 CC as a tumor specific marker. The antigen-interaction-site is further scFv,
 CC which specifically binds to or interacts with an antigen chosen from
 CC EpCAM, CCR5, CD19, EphA2, HER-2 neu, HER-3, HER-4, EGFR, PSMA, CEA, MUC-1
 CC (mucin), MUC2, MUC3, MUC4, MUC5AC, MUC5B, MUC7, betaHCG, Lewis X, CD20,
 CC CD33, CD30, ganglioside GD3, 9-O-Acetyl-GD3, GM2, Globo H, fucoseyl GM1,
 CC Poly SA, GD2, carboxypeptidase IX (NM/CA IX), CD44v6, Sonic hedgehog (Shh),
 CC Wue-1, plasma cell antigen, (membrane-bound) IGF, melanoma chondroitin
 CC sulfate proteoglycan (MSP), CCR8, TNF-alpha precursor, STEAP,
 CC mesothelin, A33 antigen, prostate stem cell antigen (PSCA), Ly-6,
 CC desmoglein 4, E-cadherin neoptope, fetal acetylcholine receptor, CD25,
 CC CA19-9 marker, CA-125 marker and muellerian inhibitory substance (MIS),
 CC receptor type II, sTn (staiylated Tn antigen, TAG-72), PAP (fibroblast
 CC activated antigen), endostatin, EGFRvIII, LG, SAS and CD63. In a human
 CC binding molecule, the antibody molecule, antibody fragment or its
 CC derivative or an antibody construct, comprises a heavy chain variable
 CC (VH) region, a light chain variable (VL) region, complementarity
 CC determining regions 1-3 (CDR1-3) of a VH-region, and CDR1-3 of a VL-
 CC region. The method is useful for preparing a human binding molecule,
 CC fragment or its derivative which specifically binds to the human CD3
 CC complex. The human binding molecule polypeptide sequences, and the
 CC polynucleotide sequences encoding them are useful for the prevention,
 CC treatment or amelioration of proliferative disease, tumorous disease,
 CC inflammatory disease, immunological disorder, autoimmune disease,
 CC infectious disease, viral disease, allergic reactions, parasitic
 CC reactions, graft-versus-host diseases or host-versus-graft diseases, or
 CC for preparation of a pharmaceutical composition for the prevention,
 CC treatment or amelioration of the above mentioned diseases. This sequence
 CC represents a CDR region of a human antibody.

 PT Novel monoclonal antibody (mAb) binding to CD20 or mouse CD20, in which
 PT density of binding of mAb to B cells is two-fold higher than density of
 PT binding of mAb1F5 to B cells, useful for depleting B cells, and treating
 PT B cell disorder.
 XX
 PS Example 1; SEQ ID NO 98; 205pp; English.
 XX
 CC The invention relates to a monoclonal antibody (mAb) or its antigen-
 CC binding fragment that specifically binds to human CD20 or mouse CD20,
 CC where the density of binding of mAb or antigen-binding fragment to B
 CC cells is at least two-fold higher than the density of binding of mAb 1F5
 CC to B cells. Also included are a pharmaceutical composition comprising mAb
 CC in a carrier, a pharmaceutical composition (comprising mAb or its antigen
 CC binding fragment which specifically binds to the same antigenic
 CC determinant as a monoclonal antibody chosen from HB20-1, HB20-3, HB20-4
 CC and HB20-25 in a carrier), a cell line producing the mAb, producing the
 CC mAb, an antigen binding fragment of the mAb, an isolated nucleic acid
 CC encoding a heavy chain or light chain comprising a variable region
 CC (comprising CDR3, or CDR1, CDR2 and CDR3 regions from mAb chosen from
 CC HB20-1, HB20-3, HB20-4, HB20-5, HB20-25, HB20-11, MB20-1, MB20-2,
 CC MB20-8, MB20-10, MB20-11, MB20-14, MB20-16 and MB20-18), a vector
 CC comprising the nucleic acid, a cell comprising the nucleic acid or
 CC vector, and depleting B cells in a mammalian subject (involving
 CC administering the mAb and anti-CD22 or anti-CD19 antibody). The anti-CD20
 CC mAb, compositions and cells are useful for depleting B cells in a
 CC mammalian subject and for treating a B cell disorder. The B cell disorder
 CC is B cell malignancy or autoimmune disease e.g. rheumatoid arthritis,
 CC idiopathic thrombocytopenic purpura or hemolytic anemia. The mammalian
 CC subject is resistant to anti-CD20 mAb therapy or resistant to therapy
 CC with mAb C2B8. The mammalian subject has been or is currently treated
 CC with chemotherapy. The mammalian subject had a relapse in a B cell
 CC disorder. The mammalian subject is immunocompromised. The present
 CC sequence represents a CDR (complementarity determining region) from anti-
 CC CD20 monoclonal antibody.

PT	expressing TAG-72.
XX	

PS Claim 8; SEQ ID NO 10; 86pp; English.

XX The invention provides humanized anti-TAG-72 CC49 monoclonal antibodies.

CC The antibodies include a light chain complementarity determining region L

CC -CDR1, H-CDR2 and L-CDR3 and a heavy chain complementarity determining

CC -CDR1, L-CDR2 and L-CDR3 from humanized antibody HuCC49V10. The L

CC region that includes the corresponding amino acid from human monoclonal

CC antibody LEN at position 5, 19, 21 and 106 in the light chain. The H-

CC CDR1, H-CDR2 and H-CDR3 are within a heavy chain HuCC49V10 framework

CC comprising a human monoclonal antibody 21/28' CL residue at positions 20,

CC 38, 48, 66, 67, 69 and 80 in the heavy chain. The humanized CC49

CC antibodies retain binding affinity for tumor-associated glycoprotein TAG-

CC 72 and have reduced immunogenicity as compared to a parental HuCC49V10

CC antibody. Methods are disclosed for using these antibodies in the

CC treatment or diagnosis of a tumor, such as a carcinoma, expressing TAG-

CC 20. The present sequence is the amino acid sequence of L-CDR2 of

CC HuCC49V10. In a claimed monoclonal antibody, L-CDR2 comprises this

CC sequence.

PS Disclosure; SEQ ID NO 16; 86pp; English.

XX

CC The invention provides humanized anti-TAG-72 CC49 monoclonal antibodies.

CC The antibodies include a light chain complementarity determining region L

CC -CDR1, L-CDR2 and L-CDR3 and a heavy chain complementarity determining

CC region H-CDR1, H-CDR2 and H-CDR3 from humanized antibody HuCC49V10. The L

CC -CDR1, L-CDR2 and L-CDR3 are within a HuCC49V10 light chain framework

CC region that includes the corresponding amino acid from human monoclonal

CC antibody LEN at position 5, 19, 21 and 106 in the light chain. The H-

CC CDR1, H-CDR2 and H-CDR3 are within a heavy chain HuCC49V10 framework

CC comprising a human monoclonal antibody 21/28' CL residue at positions 20,

CC 38, 48, 66, 67, 69 and 80 in the heavy chain. The humanized CC49

CC antibodies retain binding affinity for tumor-associated glycoprotein TAG-

CC 72 and have reduced immunogenicity as compared to a parental HuCC49V10

CC antibody. Methods are disclosed for using these antibodies in the

CC treatment or diagnosis of a tumor, such as a carcinoma, expressing TAG-

CC 20. The present sequence is the amino acid sequence of L-CDR2 of LEN.

PT New modified antibody having human/humanized heavy and light chain

PT variable regions and comprising a heterologous peptide contained entirely

PT within an antibody display region (ADR), useful for treating e.g.,

PT cancer.

XX

PS Disclosure; SEQ ID NO 7; 132pp; English.

XX

CC The invention relates to methods for modifying antibodies and antibody

CC fragments by following certain Antibody Display Region (ADR) rules,

CC thereby resulting in improved production of antibodies and fragments.

CC These ADR rules define certain amino acid residues within each

CC complementarity determining region (CDR) that have a higher tolerance for

CC modification. Such residues are distinguished from those that are

CC essential for antibody structure and function. In one embodiment,

CC antibodies are modified by the introduction of a heterologous binding

CC domain peptide into one or more CDRs. The resulting Synthobody (TM)

CC molecules provide improved accessibility of the heterologous binding

CC domain to its binding partner. The invention provides modified antibodies

CC and antibody fragments modified according to the ADR rules, and

CC pharmaceutical compositions containing such modified antibodies or
CC fragments. The modified antibodies or fragments are useful for treating
CC or preventing a cancer characterized by the presence of a cancer antigen
CC or an infectious disease (claimed). They are also useful for treating
CC autoimmune diseases including rheumatoid arthritis, lupus, ulcerative
CC colitis, psoriasis or allergies, as well as viral diseases such as HIV,
CC bacterial diseases, and protozoal diseases. The present sequence is that
CC of a peptide used in the production of a modified antibody according to
CC ADR rules. The modified antibody specifically binds to the human milk fat
CC globule antigen.

Novel bispecific antibody substituting for function of cofactor that
PT enhances enzyme reaction, and recognizing both enzyme and substrates of
PT enzyme, useful for treating hemophilia A.

PS Disclosure; SEQ ID NO 219; 69pp; Japanese.

This invention describes a novel bispecific antibody which can act as a
CC cofactor to enhance an enzyme reaction and can recognize the enzyme and
CC the enzyme substrate. The antibody specifically binds to blood
CC coagulation factor VIII. The invention also describes a composition
CC comprising the antibody and a carrier, a kit useful in preventing and/or
CC treating bleeding associated with a disorder or from a disease caused by
CC bleeding. The composition includes blood coagulation factor VIII. The
CC antibody of the invention can be a blood-coagulation fibrinolysis related
CC factor including blood-coagulation factor VIII, blood coagulation factor
CC X, or blood-coagulation factor IX. The antibody comprises a complementary
CC determining region (CDR) of anti-blood-coagulation factor IX/IXa factor
CC antibody. The novel antibody or composition is useful for preventing
CC and/or treating a disease accompanying bleeding, or the disease resulting

CC from bleeding, where the disease accompanying bleeding or the disease
CC resulting from bleeding develops and/or progresses by an active reduction
CC or deletion of the blood coagulation factor VIII. The disease the
CC develops and/or progresses by an active reduction or deletion of the

CC blood coagulation factor VIII and/or activation blood coagulation factor
CC VIII, is hemophilia A or von Willebrand disease, where the hemophilia is
CC an acquired hemophilia A. This sequence represents a fragment of the
CC antibody described in the method of the invention. Note: The sequence
CC data for this patent did not form part of the printed specification, but
CC was obtained in electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences.

PT New immunoglobulin antibody that specifically binds to human glucose-6-phosphate isomerase, useful in preparing a composition for diagnosing or treating autoimmune disease.

PS Claim 11; SEQ ID NO 46; 71pp; English.

XX A new isolated immunoglobulin antibody specifically binds to human
XX glucose-6-phosphate isomerase. INDEPENDENT CLAIMS are also included for:
XX an immunopolypeptide having an amino acid sequence homologous to a
XX sequence consisting of 5-116 amino acids (SEQ ID NO. 1-108); an antisense
XX oligonucleotide that specifically hybridizes with a polynucleotide
XX encoding anti-glucose-6-phosphate isomerase antibody or encoding glucose-
XX 6-phosphate isomerase; a composition comprising immobilized human glucose-
XX 6-phosphate isomerase; a pharmaceutical composition comprising the
XX NO. 109-122); a pharmaceutical composition comprising the
XX immunopolypeptide and a carrier; diagnosing autoimmune disease; and
XX treating a patient having autoimmune disease. Preferred Antibody: The
XX isolated immunoglobulin antibody specifically binds to human glucose-6-

CC phosphate isomerase. The immunopolypeptide comprises at least one CDR
CC sequence consisting of 5-23 amino acids (SEQ ID NO. 15-56) or its
CC significant homolog. The immunopolypeptide has a triplet of CDR
CC sequences. Each CDR of the triplet is separated from other CDR's by a
CC spacer amino acid sequence. The spacer amino acid sequence is a framework
CC region sequence having an amino acid sequence consisting of 11-32 amino
CC acids (SEQ ID NO. 57-108) or its significant homolog. The CDR's of the
CC triplet are selected from either a light chain group or a heavy chain
CC group. The CDR's are matched according to their Fab source. The framework
CC amino acid sequence is matched to the Fab source of the CDR triplet. The
CC amino acid sequence is a VL or VH fragment of the Fab source of the
CC matched CDR triplet and framework regions. Preferred Method: Diagnosing
CC autoimmune disease comprises determining the presence of an immune
CC complex formed by combining the blood sera of a patient with human
CC glucose-6-phosphate isomerase. Treating a patient having autoimmune
CC disease comprises administering to the patient the immunopolypeptide or
CC human glucose-6-phosphate isomerase. The method also comprises filtering
CC the patient's blood extracorporeally through a filter system containing
CC immobilized human glucose-6-phosphate isomerase. Immunosuppressive. No
CC biological data given. Gene therapy. The immunoglobulin antibody that
CC specifically binds to human glucose-6-phosphate isomerase is useful in
CC preparing a composition for diagnosing or treating autoimmune disease
CC (claimed). No relevant examples given.

 PS
 XX
 XX The invention relates to a monovalent antibody fragment comprising a
 CC single antigen binding arm and an Fc region that increases the stability
 CC of the antibody fragment compared to a Fab molecule comprising the
 CC antigen binding arm, where the Fc region comprises a complex of a first
 CC and a second Fc polypeptide, where one but not both of the Fc
 CC polypeptides is an N-terminally truncated heavy chain. Also described
 CC are: (1) a composition comprising: (a) a population of immunoglobulins
 CC where at least 75% of the immunoglobulins is the new antibody fragment,
 CC (b) two or more recombinant nucleic acids which collectively encode the
 CC new antibody fragment, or (c) the new antibody fragment and a carrier;
 CC (2) an isolated nucleic acid encoding the new antibody fragment; (3) a
 CC host cell comprising the nucleic acid; and (4) a method of preparing,
 CC making or generating the new antibody fragment. The antibody fragment,
 CC methods, and compositions of the invention are useful for diagnosing,
 CC treating or preventing a disease, e.g. cancer or an immunological
 CC disorder, such as, an autoimmune disease (e.g. rheumatoid arthritis,
 CC immune thrombocytopenia purpura, systemic lupus erythematosus, psoriasis,
 CC Sjogren's syndrome, or insulin dependent diabetes mellitus). This
 CC sequence represents a complementarity determining region (CDR) of a light
 CC chain that can be used in an antibody fragment of the invention.

 CC -1- FUNCTION: is required not only for elongation of protein synthesis
 CC but also for the initiation of all mRNA translation through
 CC initiator tRNA (fMet) aminoacylation (By similarity).
 CC -1- CATALYTIC ACTIVITY: ATP + L-methionine + tRNA(Met) = AMP +
 CC di-phosphate + L-methionyl-tRNA(Met).
 CC -1- COFACTOR: Binds 1 zinc ion per subunit (By similarity).
 CC -1- SUBUNIT: Homodimer (By similarity).
 CC -1- SUBCELLULAR LOCATION: Cytoplasmic.
 CC -1- SIMILARITY: Belongs to the class-I aminoacyl-tRNA synthetase
 CC family. MetG type 1 subfamily.
 CC -1- SIMILARITY: Contains 1 tRNA-binding domain.
 CC This Swiss-Prot entry is copyright. It is produced through a collaboration
 CC between the Swiss Institute of Bioinformatics and the EMBL outstation -

 CC -1- FUNCTION: This protein is a component of the acetyl coenzyme A
 carboxylase complex; first, biotin carboxylase catalyzes the
 carboxylation of the carrier protein and then the transcarboxylase
 transfers the carboxyl group to form malonyl-CoA (By similarity).
 CC -1- CATALYTIC ACTIVITY: ATP + biotin-carboxyl-carrier protein + CO(2)

CC = ADP + phosphate + carboxybiotin-carboxyl-carrier protein.
 CC -1- PATHWAY: long-chain fatty acid biosynthesis; first step.
 CC -1- SUBUNIT: Acetyl-CoA carboxylase is a heterohexamer of biotin
 CC carboxyl carrier protein, biotin carboxylase and the two subunits
 CC of carboxyl transferase in a 2:2 complex (By similarity).

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

XX New antibodies that bind to CD33, useful for treating a disease
PT associated with CD33 expression, such as myelodysplastic syndrome, acute
PT or chronic myeloid leukemia.

XX Claim 1; SEQ ID NO 6; 124pp; English.

XX The present invention describes an isolated anti-CD33 antibody or its
CC epitope-binding fragment comprising: (a) at least one complementarity-
CC determining region (CDR); or (b) at least heavy chain variable region

CC comprising 3 CDRs, and at least one light chain variable region, where
CC the CDR has the ability to bind CD33. Also described: (1) an
CC immunoglobulin comprising the antibody or its epitope-binding fragment
CC linked to a drug or prodrug; (2) a composition comprising the antibody or
CC epitope-binding fragment and a drug or prodrug; (3) a pharmaceutical
CC composition comprising the immunoglobulin, composition or the antibody
CC defined above, or its epitope-binding fragment, and a pharmaceutical
CC agent; (4) a diagnostic reagent comprising the antibody defined above,
CC where the antibody or antibody fragment is labelled; (5) inhibiting the
CC growth of a cell expressing CD33 by contacting the cell with the above
CC defined antibody or its epitope-binding fragment, immunoglobulin, or
CC (pharmaceutical) composition; (6) determining whether a biological sample
CC contains a myelogenous cancer cell; (7) an improved antibody or its
CC epitope-binding fragment that specifically binds to CD33; (8) an isolated
CC polynucleotide encoding the antibody or its epitope-binding fragment
CC defined above; (9) an isolated polynucleotide encoding a light or heavy
CC chain of the antibody defined above or its epitope-binding fragment; (10)
CC a recombinant vector comprising the polynucleotide; (11) a host cell
CC transformed with the recombinant vector; (12) producing an antibody or
CC its epitope-binding fragment having the ability to bind CD33; and (13)
CC obtaining CD33 from a biological material. The anti-CD33 antibody has
CC cytostatic activity. The antibody or its epitope-binding fragment
CC immunoglobulin, composition can be used for treating a subject having a
CC disease where CD33 is expressed, such as myelodysplastic syndrome, acute
CC myeloid leukaemia, chronic myeloid leukaemia or pro-myelocytic leukaemia.
CC It can also be used for inhibiting the growth of cells expressing CD33,
CC and for in vivo imaging or as affinity purification agents. The present
CC sequence represents the mouse anti-CD33 antibody My9-6 light chain CDR3,
CC which is used in an example from the present invention.

PT New substantially pure interleukin-21 polypeptide, useful for diagnosing,

PT disease, type I diabetes, Graves disease, multiple sclerosis, psoriasis

XX 3-11-1900

PS Disclosure; SEQ ID NO 6; 65bp; English.

XX The present sequence is that of a peptide fragment of human interleukin-21 (IL-21) ADB8508, including the Q19 residue important for gamma chain interaction. The invention provides antagonists of the IL-21 receptor.

CC These include mutants of IL-21 in which the Gln residue at position 119
CC of the mature polypeptide is substituted by Asp or in which the Gln
CC residues at positions 114 and 119 of the mature polypeptide are both
CC replaced by Asp. The mutant IL-21 polypeptides inhibit or suppress T-cell
CC activation. They preferably comprise a sequence that increases

CC circulating half-life, such as the FC region of an IgG molecule and may
CC further comprise an antigenic tag. Such antigens inhibit cellular
CC proliferation in response to either anti-CD3 monoclonal antibodies or
CC anti-CD3 antibodies applied together with IL-2 and/or IL-15 together with

CC IL-21. A claimed method of suppressing the immune response in a patient
CC comprises administering the IL-21 antagonist or a nucleic acid encoding
CC it. The method is used to treat an autoimmune disease such as rheumatic
CC disease, including systemic lupus erythematosus, Sjogren's syndrome,
CC

CC scleroderma, mixed connective tissue disease, dermatomyositis,
CC polymyositis, Reiter's syndrome, or Behcet's disease, or rheumatoid
CC arthritis, type I diabetes, autoimmune disease of the thyroid such as
CC Hashimoto's thyroiditis or Graves disease, an autoimmune disease of the

central nervous system such as multiple sclerosis, myasthenia gravis, or encephalomyelitis, or an autoimmune disease selected from pemphigus vulgaris, pemphigus vegetans, pemphigus foliaceus, Senechal-Usher syndrome, Crohn's disease, ulcerative colitis, Sjögren's syndrome, rheumatoid arthritis, psoriasis or inflammatory bowel disease; all

CC Brazilian Penitentiary System (not
CC claimed).

XX
PS Claim 11; Page 34; 80pp; English.
XX
CC The invention relates to monoclonal antibody which binds the clumping
CC factor A (ClfA) protein from Staphylococcus aureus. The anti-ClfA
CC monoclonal antibody is useful for treating or preventing S. aureus
CC infection in a human or animal, and for inhibiting the binding of
CC staphylococcal bacteria to fibrinogen or fibrin. The immunogenic fragment
CC S. aureus Clf40 protein, S. aureus Clf33 protein, or the S. aureus N3
CC protein is useful for inducing an immunological response in a human or
CC animal. These staphylococcal infections include wound infections, sepsis,
CC impetigo, furuncles, pneumonia, septic arthritis or endocarditis. The
CC present sequence is Staphylococcus aureus ClfA specific monoclonal
CC antibody 13-2VLA-1 (variable light sequence) protein

PT Treating, preventing or ameliorating symptoms associated with
PT immunological disorders of the nervous system, e.g. multiple sclerosis,
PT comprises administering agonists of an interleukin (IL)-21 or IL-21
PT receptor.
XX
PS Claim 4; SEQ ID NO 2; 83pp; English.
XX
CC This invention relates to a novel method for treating an immunological
CC disorder of the nervous system by modulating the human cytokine
CC interleukin-21 (IL-21) or the IL-21 receptor, also known as IL-21R or MU-
CC 1. Specifically, it refers to a method for ameliorating a symptom of
CC multiple sclerosis where the agonist is selected from an IL-21
CC polypeptide, an agonistic anti-IL21R antibody or an antigen-binding
CC fragment of an agonistic anti-IL21R antibody and can modulate a disorder
CC associated with IL-10 deficiency. The present invention describes a
CC pharmaceutical composition comprising an IL-21/IL-21R agonist cited above
CC and an antiinflammatory agent or protein that stimulates myelin basic
CC protein in order to affect an IL-10 deficiency or disorder associated
CC thereof. Accordingly, these compositions exhibit neuroprotective activity
CC and can be used for gene therapy purposes. This polypeptide sequence is
CC the human IL-21 protein sequence of the invention.

XX New polynucleotides encoding interleukin-21 analogs, useful for treating
PT allergic diseases as well as asthma, parasitic diseases, inflammatory
PT diseases (e.g. multiple sclerosis), cancer, or infectious diseases.

XX Claim 3; SEQ ID NO 2; 28pp; English.

XX The invention relates to an isolated polynucleotide encoding interleukin
CC -21 analogs. Also included are the interleukin-21 analog proteins, a
CC vector comprising the polynucleotide, an isolated host cell comprising
CC the vector and a process for producing a polypeptide comprising culturing
CC the host cell under conditions for production of the polypeptide. The
XX polynucleotides and polypeptides, composition and method are useful for
CC treating allergic diseases as well as asthma, parasitic diseases,
CC inflammatory diseases such as multiple sclerosis, cancer, or infectious
CC diseases. The present sequence represents an IL-21 analog of the

PT New expression vectors for the large-scale production of IL-21 proteins
PT comprises a prokaryotic origin of replication, a transcriptional
PT initiation DNA element, a polynucleotide sequence and a transcriptional
PT terminator.
XX
XX Claim 13; SEQ ID NO 28; 90pp; English.
XX
CC The present invention describes an expression vector for producing
CC interleukin 21 (IL-21) protein. The expression vector comprises the
CC following operably linked elements: (a) a prokaryotic origin of
CC replication; (b) a transcriptional initiation DNA element; (c) an IL-21
CC polynucleotide sequence having the 405 base pair sequence given in SEQ ID
CC NO:27 (ADP70484); and (d) a transcriptional terminator. Also described:
CC (1) a prokaryotic host cell transformed with the expression vector
CC described above; (2) producing IL-21 proteins; (3) isolating insoluble IL-
CC -21 protein; and (4) a composition comprising an IL-21 protein comprising
CC amino acids residues of the 134 amino acid sequence given in SEQ ID NO:28
CC (ADP70485) at a concentration of about 10 mg/ml IL-21 protein in 10 mM
CC histidine, and 4.7 % mannitol at pH 5.3. The composition and methods are

CC useful for the large-scale production of IL-21 in prokaryotic hosts. The
CC present sequence represents a human IL-21 protein which has been codon
CC optimised for prokaryotic expression, which is used in an example from
CC the present invention.

PT Inducing B cell progenitor differentiation into memory B cell and a
PT plasma cell, useful for treating immunodeficiency, by contacting cell
PT population of B cell progenitor with an activator of e.g. Janus activated
PT kinase 1 (JAK1).
XX
PS Disclosure; SEQ ID NO 1; 75pp; English.
XX
XX The invention comprises a method of inducing differentiation of a B cell
XX progenitor into a memory B cell and/or a plasma cell. The method involves
XX contacting a population of cells which contain a B cell progenitor with
XX an agent that activates at least one of the following: Janus activated
XX kinase 1 (JAK1), JAK3, signal transducer and activator, transcription 5A
XX (STAT5A), or STAT5B. The method of the invention is useful for treating a
XX subject with a either a memory B cell or plasma cell deficiency, such as
XX treating a subject who has undergone a bone marrow transplant. The method
XX of the invention is useful for enhancing an immune response in a subject.
XX
XX The present amino acid sequence represents a human interleukin-21 (IL-
XX 21).

XX New human cytokine, designated zalphall ligand, useful for stimulating
PT the proliferation and/or development of hematopoietic cells in vitro and
PT in vivo, and for treating tumorigenesis.
XX
XX Disclosure; Page 205-206; 256pp; English.
PS
XX
XX The present sequence represents a human zalphall ligand polypeptide,
CC which is a cytokine. The zalphall ligand is useful for stimulating the
CC proliferation and development of haematopoietic cells in vitro and in
CC vivo. Zalphall ligand polynucleotides can be used as primers or probes
CC for cloning the zalphall gene. The zalphall ligand is useful for treating
CC tumourigenesis. A zalphall ligand-saporin fusion toxin may be used for
CC treating leukaemias and lymphomas. Antagonists against zalphall ligand
CC are useful as research reagents for characterizing ligand-receptor
CC interaction. Antagonists are also useful for inhibiting expansion,
CC proliferation, activation and differentiation of cells involved in
CC regulating hematopoiesis. The zalphall ligand may also be used to
CC stimulate an immune response against B cell tumour, a virus, a parasite
CC or a bacterium. The zalphall polypeptides, polynucleotides, antagonists,
CC agonists and antibodies are also useful for the detection, diagnosis,
CC prevention, and treatment of diseases associated with a zalphall ligand
CC genetic defect

XX
XX New zalphall ligand polypeptides and polynucleotides, useful for
PT stimulating proliferation, activation, differentiation and/or induction
PT of inhibition of specialized cell function, or for stimulating an
PT antigenic response.
XX
XX Claim 7; Col 125-126; 105pp; English.
XX
XX The present invention relates to the isolation of a novel cytokine,
CC zalphall ligand and the polynucleotide encoding it. The invention also
CC gives the sequence for the zalphall receptor and the polynucleotide
CC encoding it. The zalphall ligand polypeptide stimulates proliferation of
CC natural killer (NK) cells or NK cell progenitors, the activation of NK
CC cells, proliferation of T-cells, proliferation of B-cells stimulated with
CC anti-CD40 antibodies, stimulates an antigenic response in a mammal, and
CC reduces proliferation of B-cells stimulated with anti-IGM antibodies. The
CC zalphall ligand polypeptide is also useful in preparing antibodies that
CC bind to zalphall ligand epitopes. The zalphall ligand polynucleotides can
CC be used as probes or primers to clone regions of a zalphall ligand gene,
CC and in gene therapy. Zalphall ligand may also be used to identify
CC inhibitors of its activity, to enhance the generation of anti-tumour
CC responses with or without the infusion of donor lymphocytes, and to
CC activate or stimulate the immune system. The present sequence represents
CC human zalphall ligand polypeptide. The cDNA encoding this is isolated
CC from a cDNA library from activated human peripheral blood cells (hPBCS)

XX
XX Treating or preventing arthritic disorder, cancer or infectious disorders
PT in a subject, involves administering a modulator of interleukin-21 or its
PT receptor which modulate immune cell activity.
XX
XX Disclosure; Page 37; 176pp; English.
XX
XX The invention relates to a novel method for treating or preventing an
CC arthritic disorder in a subject. The method involves administering to the
CC subject an interleukin-21 (IL-21)/IL-21 receptor (IL-21R) antagonist
CC optionally in combination with another therapeutic agent, to inhibit or
CC reduce immune cell activity in the subject. The method is also useful for
CC treating or preventing cancer or an infectious disorder, in a subject, by
CC administering IL-21/IL-21R agonist, to increase immune cell activity. The
CC method of the invention has antirheumatic, antiarthritic, osteopathic,
CC antipsoriatic, cytoskeletal, antibacterial, virucide, antiparasitic,
CC immunosuppressive, antidiabetic, neuroprotective, dermatological,
CC antitumor, antinausea, antiallergic, antinausea, hepatotropic,
CC antihypertensive, and antidiabetic activity. The method is useful for
CC treating or preventing an arthritic disorder such as rheumatoid
CC arthritis, juvenile rheumatoid arthritis, osteoarthritis, psoriatic
CC arthritis or ankylosing spondylitis, and also cancer such as solid
CC tumor, soft tissue tumor or metastatic lesion, or an infectious
CC disorder such as bacterial, viral or parasitic infection in a mammal,
CC preferably human. A method of the invention is also useful for

increasing the ability of a vaccine composition containing an antigen to elicit a protective immune response in a subject against the antigen. The antigen is from a pathogen such as virus, bacterium or protozoan, or from cancer or tumor cell antigen, or expressed on the surface of cancer cell. An alternative method of the invention is useful for modulating the activity of immune or haematopoietic cells and thus to treat or prevent a variety of immune disorders, such as autoimmune diseases, for example diabetes mellitus, multiple sclerosis, myasthenia gravis, systemic lupus erythematosus, dermatitis, ulcer, asthma, allergic asthma, anaemia, hepatitis, Graves's disease, graft versus host disease, and scleroderma. The present sequence is used in an exemplification of the invention

XX
CC The invention relates to polynucleotides and polypeptides of interleukin-
CC 21 (IL-21) antagonists, that bind with specificity and exhibit an EC50
CC that is not detectable in receptor binding studies. The antagonists of
CC the invention have mutations in the D helix of the IL-21 molecule, and

can be used to inhibit the activity of IL-21 with its cognate receptor. The IL-21 antagonists are useful for diagnosing and treating disorders CC involving the aberrant expression or activity of the IL-21 polypeptide, CC such as cancer, inflammatory and autoimmune disorders, including CC rheumatoid arthritis, multiple sclerosis, systemic lupus erythematosus, CC myasthenia gravis and diabetes. The polypeptides can also be used to CC prepare antibodies that bind IL-21 epitopes, peptides or polypeptides, CC and for enhancing in vivo killing of target tissues. The present sequence CC is human IL-21 antagonist. The antagonist molecule is a mutant of IL-21 CC polypeptide, with Gln145Asp and Ile148Asp substitutions. The resulting CC mutant was designated zalphall ligand Q135D/I156D

[illegible]

CC 21). The invention provides antagonists of the IL-21 receptor. These
CC include mutants of murine IL-21 in which the Gln residue at position 119
CC of the mature polypeptide is substituted by Asp or in which the Gln
CC residues at positions 114 and 119 of the mature polypeptide are both
CC replaced by Asp. The mutant IL-21 polypeptides inhibit or suppress T-cell
CC activation. They preferably comprise a sequence that increases
CC circulating half-life, such as the Fc region of an IgG molecule and may
CC further comprise an antigenic tag. Such antagonists inhibit cellular
CC proliferation in response to either anti-CD3 monoclonal antibodies or
CC anti-CD3 antibodies applied together with IL-2 and/or IL-15 together with
CC IL-21. A claimed method of suppressing the immune response in a patient
CC comprises administering the IL-21 antagonist or a nucleic acid encoding
CC it. The method is used to treat an autoimmune disease such as rheumatic
CC disease, including systemic lupus erythematosus, Sjogren's syndrome,
CC scleroderma, mixed connective tissue disease, dermatomyositis,
CC polymyositis, Reiter's syndrome, or Behcet's disease, or rheumatoid
CC arthritis, type I diabetes, autoimmune disease of the thyroid such as
CC Hashimoto's thyroiditis or Graves' disease, an autoimmune disease of the
CC central nervous system such as multiple sclerosis, myasthenia gravis, or
CC encephalomyelitis, or an autoimmune disease selected from pemphigus
CC vulgaris, pemphigus vegetans, pemphigus foliaceus, Senear-Usher syndrome,
CC Brazilian pemphigus, psoriasis or inflammatory bowel disease (all
CC claimed).

PT New albumin fusion protein, useful for preparing a composition for
PT treating diabetes mellitus.

Example 4; SEQ ID NO 2177; 24pp; English.

CC This invention relates to a novel albumin fusion protein having albumin
CC or biological activity. Human serum albumin is responsible for a
CC significant proportion of the osmotic pressure of serum and also
CC functions as a carrier of endogenous and exogenous ligands. The fusion of
CC albumin to a therapeutic protein may increase shelf-life and stability of
CC the therapeutic protein. The albumin fusion protein of the invention may
CC allow production of compositions with antidiabetic activity whilst the
CC nucleotide sequence which encodes it may be useful for gene therapy. The
CC albumin fusion protein is useful for preparing a composition for treating
CC diabetes mellitus. The present sequence is that of a therapeutic protein
CC which was fused with human albumin to create a novel albumin fusion
CC protein of the invention. Note: The sequence data for this patent did not
CC form part of the printed specification, but was obtained in electronic
CC format directly from WIPO at ftp.wipo.int/pub/publichepct_sequences

 PT Stimulating an immune response in a mammal exposed to an antigen or
 PT pathogen, useful for enhancing anti-tumor activity resulting in reduced
 PT tumor progression or metastasis, comprises administering zalphall ligand
 PT polypeptide.
 PS Claim 1; SEQ ID NO 2; 103pp; English.
 XX
 CC The invention relates to stimulating an immune response in a mammal
 CC exposed to an antigen or pathogen comprising administering a composition
 CC comprising mature zalphall ligand polypeptide comprising residues 32-162
 CC of ADH44572 in a pharmaceutical vehicle. Also included are stimulating an
 CC immune response in a mammal exposed to an antigen or pathogen
 CC (comprising: (a) determining (in)directly the level of antigen or
 CC pathogen present in the mammal; (b) administering a composition
 CC comprising zalphall ligand polypeptide in a pharmaceutical vehicle; (c)
 CC determining (in)directly the level of antigen or pathogen in the mammal;
 CC and (d) comparing the antigen or pathogen level in (a) with (b), where a
 CC change in the level indicates stimulation of immune response), and
 CC stimulating an immune response in a mammal exposed to an antigen or
 CC pathogen (comprising: (a) determining a level of antigen- or pathogen-
 CC specific antibody; (b) administering a composition comprising zalphall
 CC ligand polypeptide in a pharmaceutical vehicle; (c) determining a post
 CC administration level of the antigen- or pathogen-specific antibody; and
 CC (d) comparing the level of the antibody in (a) with (b), where an
 CC increase in the antibody level indicates stimulation of immune response).
 CC The method is useful for stimulating an immune response in a mammal
 CC exposed to an antigen or pathogen, and for enhancing anti-tumor activity
 CC resulting in a reduction in tumor progression, decrease in metastasis,
 CC or tumor strasis. The tumor may be a haematopoietic tumour, a lymphoma
 CC or a B cell tumour. The zalphall ligand is useful for treating a wide
 CC range of diseases arising from defects in the immune system, e.g.
 CC systemic lupus erythematosus, rheumatoid arthritis, myasthenia gravis, or
 CC diabetes, for boosting immunity to infectious diseases, treating
 CC immunocompromised patients, such as HIV+ patients and in improving
 CC vaccines. The present sequence is a human zalphall ligand protein.

 PT Inhibiting interferon gamma (IFNgamma) levels and T helper cell
 PT development and function in a T cell or cell population using IL-21
 PT modulators, useful for the preventing and/or treating asthma, allergy,
 PT arthritis, lupus and diabetes.
 XX
 XX
 PS Claim 1; SEQ ID NO 2; 59pp; English.
 XX
 CC The present invention describes a method for inhibiting interferon gamma
 CC (IFNgamma) levels in a T cell population by contacting the T cell or cell
 CC population with an interleukin 21 (IL-21) agonist in an amount sufficient
 CC to inhibit IFNgamma in the T cell or cell population, wherein the agonist
 CC is an IL-21 polypeptide comprising an amino acid sequence at least 85%
 CC identical to the 162 amino acids (SEQ ID NO: 2, ADJ25621), and which is
 CC capable of binding to an IL-21R. An IL-21 agonist has antiasthmatic,
 CC antiallergic, antirheumatic, antineumatic, neuroprotective,
 CC antiinflammatory, dermatological, immunosuppressive, muscular and
 CC antiporiatic activities. The methods and compositions of the present
 CC invention are useful for the diagnosis, prevention and/or treatment of
 CC diseases or conditions associated with aberrant expression or activity of
 CC IL-21, T helper 1 (Th1) and/or Th2, such as asthma, allergy, rheumatoid
 CC arthritis, multiple sclerosis, lupus, diabetes, Crohn's disease,
 CC psoriasis and myasthenia gravis. The present sequence represents human IL
 CC -21, which is used in the exemplification of the present invention.

 XX
 PS Claim 6; SEQ ID NO 2; 32pp; English.
 CC
 CC The invention relates to an interleukin (IL)-21 that is used for the
 CC treatment of diseases or conditions where eosinophils are involved in a
 CC protective response in a subject, e.g. allergic conditions and/or
 CC parasitic diseases. Methods of the invention are useful for the treatment
 CC of diseases or conditions where eosinophils are involved in a protective
 CC response in a subject, such as allergic conditions (e.g. asthma, allergic
 CC rhinitis or allergic diseases of the skin) and/or parasitic diseases,
 CC especially helminthic infection. The current sequence represents the DNA
 CC sequence encoding IL-21. Note: This sequence is not encoded by that of
 CC ADM41016, which we are told in the specification is the IL-21 encoding
 CC nucleotide.

 PT New zalphall ligand polynucleotide and polypeptide molecules, useful for
 PT treating cancer, e.g. melanoma, solid tumor, hematopoietic tumor, or
 PT lymphoma.
 XX
 PS Claim 1; SEQ ID NO 2; 111pp; English.
 CC
 CC The invention describes an isolated polypeptide comprising a sequence of
 CC amino acid residues that is at least 90 or 95% identical to residues 41
 CC (Gln to 148 (Ile), or 32 (Gln) to 148 (Ile) of a sequence of 162 amino
 CC acids (SEQ ID NO:2, human zalphall ligand), fully defined in the
 CC specification. Also described are: a pharmaceutical composition
 CC comprising the polypeptide, and a vehicle; a method of treating cancer in
 CC a mammal; a method of stimulating an immune response in a mammal with
 CC melanoma; a method of stimulating an immune response in a mammal bearing
 CC a tumour; an isolated polynucleotide comprising a sequence of nucleotides

CC that encode amino acid residues cited above, where the polynucleotide
CC encodes a polypeptide that binds a receptor comprising 538 amino acids,
CC fully defined in the specification; a pharmaceutical composition
CC comprising the polynucleotide encoding, in a pharmaceutically acceptable
CC vehicle; an expression vector comprising the following operably linked
CC elements a control element; and a DNA segment comprising the
CC polynucleotide; and an isolated polynucleotide molecule comprising at
CC least 10 nucleotides of the polynucleotide sequence of 642 bp, fully
CC defined in the specification. The molecules, compositions and methods are
CC useful for treating cancer, e.g. melanoma, solid tumour, hematopoietic
CC tumour, or lymphoma. This is the amino acid sequence of novel human
CC cytokine zalphall ligand.

XX Treating, preventing or ameliorating symptoms associated with

PT immunological disorders of the nervous system, e.g. multiple sclerosis,

PT comprises administering agonists of an interleukin (IL)-21 or IL-21

PT receptor.

XX Disclosure; SEQ ID NO 10; 83pp; English.

XX This invention relates to a novel method for treating an immunological

CC disorder of the nervous system by modulating the human cytokine

CC interleukin-21 (IL-21) or the IL-21 receptor, also known as IL-21R or MU-

CC 1. Specifically, it refers to a method for ameliorating a symptom of

CC multiple sclerosis where the agonist is selected from an IL-21

CC polypeptide, an agonistic anti-IL21R antibody and an antigen-binding

CC fragment of an agonistic anti-IL21R antibody and can modulate a disorder

CC associated with IL-10 deficiency. The present invention describes a

CC pharmaceutical composition comprising an IL-21/IL-21R agonist cited above

CC and an antiinflammatory agent or protein that stimulates myelin basic

CC protein in order to affect an IL-10 deficiency or disorder associated

CC thereof. Accordingly, these compositions exhibit neuroprotective activity

CC and can be used for gene therapy purposes. This polypeptide sequence is

CC the full length human IL-21 protein sequence of the invention.

 PT Use of interleukin-21, its analog, derivative, active fragment, mimetic
 PT or polynucleotide for management, treatment or prevention of
 PT diseases/conditions involving T or B cells e.g. rheumatoid arthritis.
 XX
 XX Claim 2; SEQ ID NO 2; 37pp; English.
 XX
 XX The invention relates to the use of interleukin-21 (IL-21) polypeptide
 CC (SEQ ID No:2), its analog, derivative or active fragment, IL-21 mimetic,
 CC or IL-21 polynucleotide for the management, treatment or prevention of
 CC diseases or conditions, where T or B cells are involved. Also described
 CC are: (1) a combination of IL-21, its analog, derivative or active
 CC fragment, IL-21 mimetic, or IL-21 polynucleotide, and one or more active
 CC substances involved in diseases or conditions where T or B cells are
 CC involved; (2) a method of managing, treating or preventing diseases or
 CC conditions where T or B cells are involved in a subject, by administering
 CC IL-21, its analog, derivative or active fragment, IL-21 mimetic, or IL-21
 CC polynucleotide; and (3) a pharmaceutical composition comprising a
 CC combination of IL-21, its analog, derivative or active fragment, IL-21
 CC mimetic, or IL-21 polynucleotide, and one or more active substances
 CC involved in diseases or conditions where T or B cells are involved,
 CC together with additives. The following are also disclosed: targeting IL-
 CC 21 to a dendritic cell by conjugating IL-21 to an antibody; culturing
 CC dendritic cells in vitro with IL-21 with or without other cytokines;
 CC growth factors and/or antigens to generate regulatory dendritic cells;
 CC isolated protein polypeptides that are substantially identical to IL-21;
 CC and a variety of other polypeptide fusions, IL-21 polypeptide, its
 CC analog, derivative or active fragment, IL-21 mimetic, or IL-21
 CC polynucleotide are useful for the manufacture of a medicament for the
 CC management, treatment or prevention of diseases or conditions, where T or
 CC B cells are involved, where the disease or conditions where T or B cells
 CC involved are autoimmune diseases or conditions such as rheumatoid
 CC arthritis, multiple sclerosis, type 1 diabetes, or allograft rejection.
 CC This sequence represents human IL-21.

 PT New human cytokine, designated zalphall ligand, useful for stimulating
 PT the proliferation and/or development of hematopoietic cells in vitro and
 PT in vivo, and for treating tumorigenesis.
 XX
 XX Example 31; Page 233-235; 256pp; English.
 XX
 XX The present sequence represents a MBP-human zalphall ligand fusion in the
 CC plasmid pTAP126. Zalphall ligand is a cytokine. The zalphall ligand is
 CC useful for stimulating the proliferation and development of
 CC hematopoietic cells in vitro and in vivo. Zalphall ligand
 CC polynucleotides can be used as primers or probes for cloning the zalphall
 CC gene. The zalphall ligand is useful for treating tumorigenesis. A
 CC zalphall ligand-saporin fusion toxin may be used for treating leukemias
 CC and lymphomas. Antagonists against zalphall ligand are useful as research
 CC reagents for characterizing ligand-receptor interaction. Antagonists are
 CC also useful for inhibiting expansion, proliferation, activation and
 CC differentiation of cells involved in regulating hematopoiesis. The
 CC zalphall ligand may also be used to stimulate an immune response against
 CC B cell tumour, a virus, a parasite or a bacterium. The zalphall
 CC polypeptides, polynucleotides, antagonists, agonists and antibodies are
 CC also useful for the detection, diagnosis, prevention, and treatment of
 CC diseases associated with a zalphall ligand genetic defect

PT New zalphall ligand polypeptides and polynucleotides, useful for
PT stimulating proliferation, activation, differentiation and/or induction
PT of inhibition of specialized cell function, or for stimulating an
PT antigenic response.
XX
XX
PS Example 31; Col 161-166; 105pp; English.
XX
XX The present invention relates to the isolation of a novel cytokine,
CC zalphall ligand and the polynucleotide encoding it. The invention also
CC gives the sequence for the zalphall receptor and the polynucleotide
CC encoding it. The zalphall ligand polypeptide stimulates proliferation of
CC natural killer (NK) cells or NK cell progenitors, the activation of NK
CC cells, proliferation of T-cells, proliferation of B-cells stimulated with
CC anti-CD40 antibodies, stimulates an antigenic response in a mammal, and
CC reduces proliferation of B-cells stimulated with anti-IgM antibodies. The
CC zalphall ligand polypeptide is also useful in preparing antibodies that
CC bind to zalphall ligand epitopes. The zalphall ligand polynucleotides can
CC be used as probes or primers to clone regions of a zalphall ligand gene,
CC and in gene therapy. Zalphall Ligand may also be used to identify
CC inhibitors of its activity, to enhance the generation of anti-lymphocur
CC responses with or without the infusion of donor lymphocytes, and to
CC activate or stimulate the immune system. The present sequence
CC representing MBP-human zalphall ligand fusion protein is used in the
CC methods of the present invention

XX
XX Stimulating an immune response in a mammal exposed to an antigen or
PT pathogen, useful for enhancing anti-tumor activity resulting in reduced
PT tumor progression or metastasis, comprises administering zalphall ligand
PT polypeptide.
XX
XX
PS Example 31; SEQ ID NO 85; 103pp; English.
XX
XX The invention relates to stimulating an immune response in a mammal
CC exposed to an antigen or pathogen comprising administering a composition
CC comprising mature zalphall ligand polypeptide comprising residues 32-162
CC of ADH44572 in a pharmaceutical vehicle. Also included are stimulating an
CC immune response in a mammal exposed to an antigen or pathogen
CC (comprising: (a) determining (in)directly the level of antigen or
CC pathogen present in the mammal; (b) administering a composition
CC comprising zalphall ligand polypeptide in a pharmaceutical vehicle; (c)
CC determining (in)directly the level of antigen or pathogen in the mammal;
CC and (d) comparing the antigen or pathogen level in (a) with (b), where a
CC change in the level indicates stimulation of immune response), and
CC stimulating an immune response in a mammal exposed to an antigen or
CC pathogen (comprising: (a) determining a level of antigen- or pathogen-
CC specific antibody; (b) administering a composition comprising zalphall
CC ligand polypeptide in a pharmaceutical vehicle; (c) determining a post
CC administration level of the antigen- or pathogen-specific antibody; and
CC (d) comparing the level of the antibody in (a) with (b), where an
CC increase in the antibody level indicates stimulation of immune response).
CC The method is useful for stimulating an immune response in a mammal
CC exposed to an antigen or pathogen, and for enhancing anti-tumor activity
CC resulting in a reduction in tumour progression, decrease in metastasis,
CC or tumour stasis. The tumour may be a haematopoietic tumour, a lymphoma
CC or a B cell tumour. The zalphall ligand is useful for treating a wide
CC range of diseases arising from defects in the immune system, e.g.
CC systemic lupus erythematosus, rheumatoid arthritis, myasthenia gravis, or
CC diabetes, for boosting immunity to infectious diseases, treating
CC immunocompromised patients, such as HIV+ patients and in improving
CC vaccines. The present sequence is a human Zalphall fusion protein.

XX PS Disclosure; SEQ ID NO 85; 111pp; English.

XX CC The invention describes an isolated polypeptide comprising a sequence of

XX CC amino acid residues that is at least 90 or 95% identical to residues 41

XX CC (Gln) to 148 (Ile), or 32 (Gln) to 148 (Ile) of a sequence of 162 amino

XX CC acids (SEQ ID NO:2, human zalphall ligand), fully defined in the

XX CC specification. Also described are: a pharmaceutical composition

XX CC comprising the polynucleotide encoding; in a pharmaceutical composition

XX CC vehicle; an expression vector comprising the following operably linked

XX CC elements a control element; and a DNA segment comprising the

XX CC polynucleotide; and an isolated polynucleotide molecule comprising at

XX CC least 10 nucleotides of the polynucleotide sequence of 642 bp, fully

XX CC defined in the specification. The molecules, compositions and methods are

XX CC useful for treating cancer, e.g. melanoma, solid tumour, haematopoietic

XX CC tumour, or lymphoma. This is the amino acid sequence of a fusion protein

XX CC comprising the human zalphall ligand fused to MBP (maltose binding

XX CC protein).

 XX PT New albumin fusion protein, useful for preparing a composition for
 XX PT treating diabetes mellitus.
 XX PS Example 4; SEQ ID NO 2167; 24pp; English.
 XX CC This invention relates to a novel albumin fusion protein having albumin
 XX CC or biological activity. Human serum albumin is responsible for a
 XX CC significant proportion of the osmotic pressure of serum and also
 XX CC functions as a carrier of endogenous and exogenous ligands. The fusion of
 XX CC albumin to a therapeutic protein may increase shelf-life and stability of
 XX CC the therapeutic protein. The albumin fusion protein of the invention may
 XX CC allow production of compositions with antidiabetic activity whilst the
 XX CC nucleotide sequence which encodes it may be useful for gene therapy. The
 XX CC albumin fusion protein is useful for preparing a composition for treating
 XX CC diabetes mellitus. The present sequence is the amino acid sequence of a
 XX CC novel full-length human albumin therapeutic fusion protein of the
 XX CC invention. Note: The sequence data for this patent did not form part of
 XX CC the printed specification, but was obtained in electronic format directly
 XX CC from WIPO at fcp.wipo.int/pub/publishedpc_sequences

XX New anti-clumping factor A (ClfA) monoclonal antibody, useful for
 PT treating or preventing Staphylococcus aureus infection e.g. wound
 PT infections, impetigo, furuncles, pneumonia, septic arthritis or sepsis in
 PT a human or animal.

XX Claim 31; Page 55; 80pp; English.

XX The invention relates to monoclonal antibody which binds the clumping
 CC factor A (ClfA) protein from Staphylococcus aureus. The anti-ClfA
 CC monoclonal antibody is useful for treating or preventing S. aureus
 CC infection in a human or animal, and for inhibiting the binding of
 CC staphylococcal bacteria to fibrinogen or fibrin. The immunogenic fragment
 CC S. aureus Clf40 protein, S. aureus Clf33 protein, or the S. aureus N3
 CC protein is useful for inducing an immunological response in a human or
 CC animal. These staphylococcal infections include wound infections, sepsis,
 CC impetigo, furuncles, pneumonia, septic arthritis or endocarditis. The
 CC present sequence is an anti-ClfA monoclonal antibody variable light chain
 CC complementarity determining region (CDR)

XX New altered antibody that binds to and neutralizes myelin associated
 PT glycoprotein (MAG), useful for preparing a composition for treating or
 PT preventing stroke or other neurodegenerative disorders e.g., Alzheimer's
 PT disease.

XX Claim 1; Page 53; 67pp; English.

XX The present invention relates to a new altered antibody or its functional
 CC fragment, which binds to and neutralizes myelin associated glycoprotein
 CC (MAG) and comprises a light chain variable domain (VL) comprising
 CC complementary determining region light 1 (CDRL1), CDRL2 or CDRL3 and/or a
 CC heavy chain variable domain (VH) comprising CDRH1, CDRH2 or CDRH3. The
 CC antibody is useful for preparing a composition for treating or preventing
 CC stroke or other neurodegenerative disorders in a human, e.g., traumatic
 CC brain injury, Alzheimer's disease, dementias, peripheral neuropathy,
 CC Parkinson's disease, Huntington's disease and multiple sclerosis. The
 CC present sequence is the anti-MAG antibody light chain CDR L3 of the
 CC invention.

 CC -1- FUNCTION: Cytokine with immunoregulatory activity. May promote the
 CC transition between innate and adaptive immunity. Induces the
 CC production of Igg(1) and Igg(3) in B-cells (By similarity). May
 CC play a role in proliferation and maturation of natural killer (NK)
 CC cells in synergy with IL15. May regulate proliferation of mature
 CC B- and T-cells in response to activating stimuli. In synergy with
 CC IL15 and IL18 stimulates interferon gamma production in T-cells
 CC and NK cells. During T-cell mediated immune response may inhibit
 CC dendritic cells (DC) activation and maturation.
 CC -1- SUBCELLULAR LOCATION: Secreted.
 CC -1- TISSUE SPECIFICITY: Expressed in activated CD4-positive T-cells
 CC but not in CD8-positive T-cells, B-cells, or monocytes.
 CC -1- SIMILARITY: Belongs to the IL-21 family.
 CC
 CC This Swiss-Prot entry is copyright. It is produced through a collaboration
 CC between the Swiss Institute of Bioinformatics and the EMBL outstation -
 CC the European Bioinformatics Institute. There are no restrictions on its
 CC use as long as its content is in no way modified and this statement is not
 CC removed.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
